## **CAMBRIDGE INTERNATIONAL EXAMINATIONS**

**Cambridge International General Certificate of Secondary Education** 

## MARK SCHEME for the October/November 2014 series

## 0610 BIOLOGY

0610/23

Paper 2 (Core Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2014 series for most Cambridge IGCSE<sup>®</sup>, Cambridge International A and AS Level components and some Cambridge O Level components.

## Abbreviations used in the Mark Scheme

separates marking points

• / separates alternatives within a marking point

• R reject

• I ignore (mark as if this material was not present)

A accept (a less than ideal answer which should be marked correct)

AW alternative wording

underline words underlined must be present

max indicates the maximum number of marks that can be awarded
 mark independently the second mark may be given even if the first mark is wrong

• A, S, P, L Axes, Size, Plots and Line for graphs

• O, S, D, L Outline, Size, Detail and Label for drawings

(n)ecf (no) error carried forward

• () the word / phrase in brackets is not required, but sets the context

ora or reverse argument.AVP any valid point

Question	Answer	Marks	Additional Guidance
1	B (Camelus dromedaries) D (Camelus ferus) C (Lama glama) E (Vicugna vicugna) A (Vicugna pacos)	max 4	1 correct = 1 mark 2 correct = 2 marks 3 correct = 3 marks 4 or 5 correct = 4 marks
		[Total: 4]	
2 (a) (i)	glucose and oxygen (either order); carbon dioxide and water (either order);	2	I if energy has been added to the LHS (and rest is accurate and balanced) but R if energy is on the LHS  A if correct chemical equation given
(ii)	maintenance of constant body temperature; movement/muscle contraction; example of movement e.g. running, breathing, peristalsis; synthesis of other chemicals/e.g. of such a chemical; growth/repair/cell division; AVP;	max 3	AW throughout  e.g. active transport/transmission of nerve impulses/deamination
b (i)	2.9 (dm³); 1.4 – 1.5 (s);	2	
(ii)	difference: male exhales greater volume/ rate of expiration is greater in male; similarity:		ora for females sex must be stated clearly
	male takes same time / 1.4 – 1.5 (s) to empty lungs;	2	

Page 4	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

(iii)	would take longer to empty lungs/AW; would exhale smaller volume of air/AW;	max 1	
(c)	tar; nicotine; carbon monoxide; smoke particles/particulates; AVP;	max 2	A only one material not in the list for AVP e.g. cyanide
(d) (i)	anaerobic respiration: does not use oxygen; does not release water; does not produce carbon dioxide; releases (very) small amounts of energy; occurs in (skeletal) muscle cells only; produces lactic acid/lactate;	max 3	A if answers given for aerobic respiration but it must be stated that this is how the question is being answered  A is only produced during exercise
(ii)	wine production/beer production/brewing/fermentation; bread making;	2	
		[Total: 17]	
3	sperm; haploid; ovary; oviduct; zygote;	5	
		[Total: 5]	

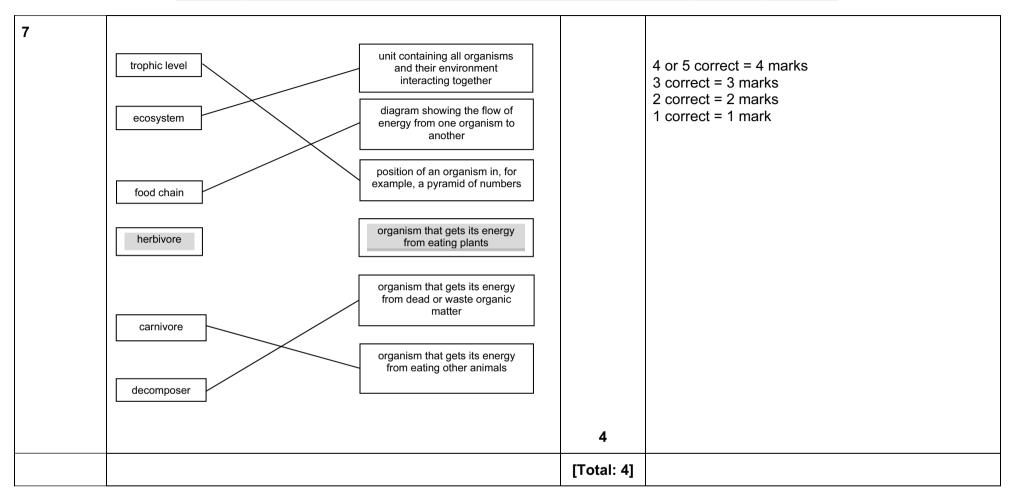

Page 5	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

4	fossil fuels: they are non-renewable/will eventually run out; if used less it would result in: less carbon dioxide released from burning; less global warming; (so less) example of adverse effect of global warming; less (other) pollution resulting from burning; example of adverse effect of such pollution; restricted use will encourage development of renewable forms of energy; restricted use means less pollution from extraction activities;		AW throughout A AVP in either section;;  max 3 for answers referring to fossil fuels
	water supplies: all life depends on supply of fresh water/animals and plants will die without fresh water/need to irrigate crops; water is a scarce resource/unevenly distributed geographically; morally wrong to use too much/deprive others/pollute water supplies; water treatment is expensive/uses energy; pure supplies must be maintained otherwise people use polluted water which can cause poisoning/transmit disease; expensive to transfer water to other places; demand for water is increasing; AVP;	max 3 max 4	max 3 for answers referring to water supplies
		[Total: 4]	

Page 6	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

5 (a	a)	-	mbines with oxygen/forms	-		
		no nucleus: more volume for presence of haemoglobin/can transport more oxygen;				
		small cell: small to pass through capillaries (without damage)/ increases surface area;			3	
(b	<b>b</b> )	white blood cell; produces antibodies/phagocytosis (or description);				either order
		platelet; produces blood clot;			4	A if different types of white blood cell are given (with correct functions)
					[Total: 7	7]
6		point of comparison	translocation	transpiration		
		substance moved	sucrose/amino acids;	water;		A sugar
		direction of movement	from region of production/leaf to region of storage/ growth/respiration;	from surface of mesophyll cells to stomata;		A region of storage to region of use/leaf to root I reference to xylem
		tissue	phloem;	mesophyll/lower epidermis;	6	
					[Total: 6	5]

Page 7	Mark Scheme S		Paper
	Cambridge IGCSE – October/November 2014	0610	23

Page 8	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

8 (a)	carbon cycle: arrow from $CO_2$ box to tree labelled $P$ ; arrow from feces to $CO_2$ box labelled $D$ ; arrow from bison to $CO_2$ box $-R$ ; arrow from tree to $CO_2$ box $-R$ ;	4	<b>A</b> arrow from faeces to CO <sub>2</sub> box ( <b>R</b> )
(b)	water cycle: arrow from cloud to land labelled <b>K</b> ; arrow from stream/faeces/bison/tree to cloud labelled <b>E</b> ;	2	arrow must show evaporation from one of these listed
		[Total: 6]	
9 (a)	carbohydrates; lipids/fats; proteins; vitamins/named vitamin; water;	max 4	
(b)	cannot be digested; adds volume to contents of alimentary canal; promotes peristalsis; prevents constipation; prevents cancer AW;	max 3	<b>A</b> AVP e.g. absorbs some fats so prevents absorption into body

Page 9	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

(c)	mechanisation (or example of); benefit: e.g. use of tractors to plough more land;  (inorganic) fertilisers; improved crop growth;  pesticides; more plants/animals grow/survive;  herbicides; kills unwanted plants so more crop growth;  artificial selection/selective breeding; improved quality of plants and animals;  irrigation; more plants/animals survive/grow more/faster;  crop rotation; reduction in pests/improved soil fertility;  genetic engineering; introduction of desirable genes from other organisms;		AW throughout  2 different methods with example required, method and example must match
		max 4	
		[Total: 11]	

Page 10	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

10 (a)					
	structure	wind-pollinated	insect-pollinated		
	anther	hang outside of the petals / loosely attached / larger	hang inside of the petals / firmly attached / smaller;		
	stalk of stamen	long/flexible	short/stiff;		
	stigma	feathery/large	sticky/small;	3	
(b)	brightly coloured/large petals or flower; production of scent/odour; production of nectar; arrangement of petals/AW;				
	presence of honey guide-lines;			max 3	
(c)	small; light; smooth/rounded;			max 1	I produced in large quantities
	Sillootii/Tourided,			IIIax I	
				[Total: 7]	

Page 11	Mark Scheme	Syllabus	Paper
	Cambridge IGCSE – October/November 2014	0610	23

11 (a) (i)	meiosis: cell division; chromosome number halved/diploid to haploid;			
(ii)	chromosome: thread of DNA; made up of string of genes;		4	
(b)	parental phenotype	Bb × Bb;		A recessive given first i.e. bB
	gametes:	$B + b \times B + b$ ;		<b>A</b> either order $(b + B \times b + B)$
	offspring genotype:	BB + Bb + Bb + bb;		A ecf if mistake is made
	offspring phenotype:	blue + blue + blue + white;		
	ratio:	3 blue: 1 white;	5	
			[Total: 9]
