Paper 1

October/November 2019

MARK SCHEME

Maximum Mark: 75

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2019 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

bestexamhelp.com

This syllabus is regulated for use in England, Wales and Northern Ireland as a Cambridge International Level 1/Level 2 Certificate.

This document consists of **14** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
1(a)(i)	Two from: <ul style="list-style-type: none"> • 2D scanner • Touchscreen • Keypad/keyboard • Card reader • Mouse • Digital camera 	2
1(a)(ii)	Two from: <ul style="list-style-type: none"> • HDD • SSD • USB flash memory drive • SD card • Any optical 	2
1(a)(iii)	Two from: <ul style="list-style-type: none"> • Monitor/Touch screen • Speaker • Printer • LED // Light 	2
1(b)(i)	<ul style="list-style-type: none"> • Increase the length of the key // make key 12-bit, etc. 	1
1(b)(ii)	<ul style="list-style-type: none"> • Cypher text 	1

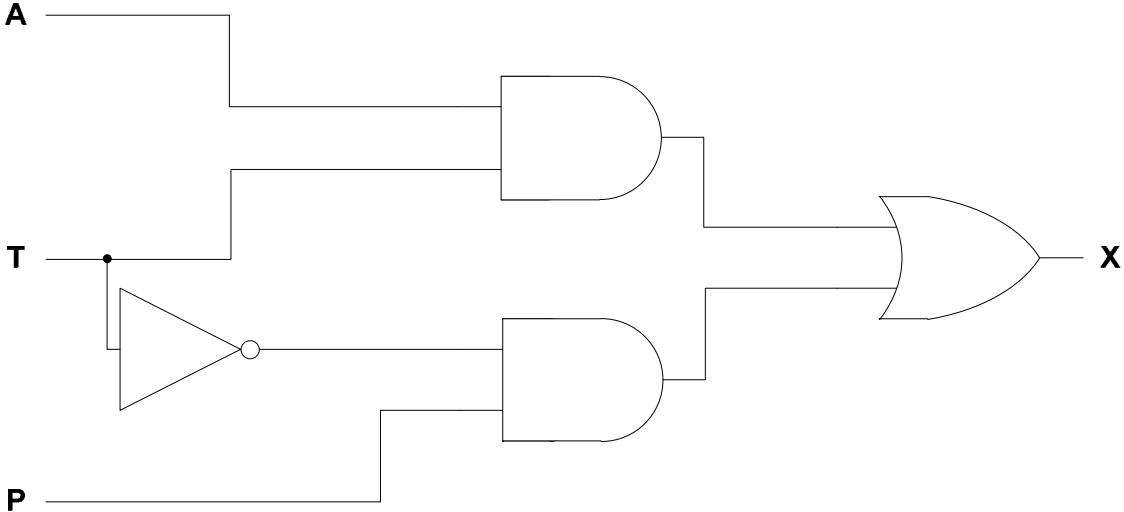

Question	Answer	Marks
1(b)(iii)	<p>Six from:</p> <ul style="list-style-type: none"> • The system could use <u>odd</u> or <u>even</u> parity • A parity bit is added • The data is checked to see if it has incorrect/correct parity // by example • If parity is correct no error is found • An acknowledgement is sent that data is received correctly • The next packet of data is transmitted • If incorrect parity is found an error has occurred • A signal is sent back to request the data is resent • The data is resent until data is received correctly/timeout occurs 	6
1(c)(i)	<p style="text-align: center;"> 1 mark 1 mark 1 mark </p> <p style="text-align: center;"> 1 mark 1 mark 1 mark </p>	6

Question	Answer	Marks
1(c)(ii)	<p>One mark for identification:</p> <ul style="list-style-type: none"> • Compression <p>Three from e.g.:</p> <ul style="list-style-type: none"> • Best compression would be lossy • Use compression algorithm • This would remove all the unnecessary data from the file // removes detail/sound that the human eye/ear may not see/hear • Reduce colour palette ... • ... so each pixel requires fewer bits • Reduce resolution • Only store what changes between frames // temporal redundancy 	4
1(d)	<p>Five from:</p> <ul style="list-style-type: none"> • The display is made up of pixels ... • ... that are arranged together as a matrix • Each pixel has three filters, red, blue and green • Shades of colour are achieved by mixing red, blue and green • The screen is backlit • Light is shone through the liquid crystals • The liquid crystals can be made to turn solid or transparent/on or off ... • ... by changing the shape of the crystal 	5

Question	Answer			Marks	
2(a)	One mark for each correct row			4	
Statement			True (✓)		False (✓)
High-level languages need to be translated into machine code to run on a computer			✓		
High-level languages are written using mnemonic codes					✓
High-level languages are specific to the computer's hardware					✓
High-level languages are portable languages			✓		

Question	Answer	Marks								
2(b)	<p>One mark for the correct tick</p> <table border="1" data-bbox="286 316 1021 943"> <thead> <tr> <th data-bbox="286 316 887 411">Example program</th> <th data-bbox="887 316 1021 411">Tick (✓)</th> </tr> </thead> <tbody> <tr> <td data-bbox="286 411 887 512"> <pre>1011100000110000 0000011011100010</pre> </td> <td data-bbox="887 411 1021 512"></td> </tr> <tr> <td data-bbox="286 512 887 711"> <pre>INP STA ONE INP STA TWO ADD ONE</pre> </td> <td data-bbox="887 512 1021 711"></td> </tr> <tr> <td data-bbox="286 711 887 943"> <pre>a = input() b = input() if a == b: print("Correct") else: print("Incorrect")</pre> </td> <td data-bbox="887 711 1021 943">✓</td> </tr> </tbody> </table>	Example program	Tick (✓)	<pre>1011100000110000 0000011011100010</pre>		<pre>INP STA ONE INP STA TWO ADD ONE</pre>		<pre>a = input() b = input() if a == b: print("Correct") else: print("Incorrect")</pre>	✓	1
Example program	Tick (✓)
