Paper 3 Advanced Practical Skills 1

May/June 2020

2 hours

You must answer on the question paper.

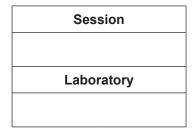

You will need: The materials and apparatus listed in the confidential instructions

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working, use appropriate units and use an appropriate number of significant figures.
- Give details of the practical session and laboratory, where appropriate, in the boxes provided.

INFORMATION

- The total mark for this paper is 40.
- The number of marks for each question or part question is shown in brackets [].
- The Periodic Table is printed in the question paper.
- Notes for use in qualitative analysis are provided in the question paper.

For Examiner's Use

This document has 12 pages. Blank pages are indicated.

Quantitative Analysis

Read through the whole method before starting any practical work. Where appropriate, prepare a table for your results in the space provided.

Show your working and appropriate significant figures in the final answer to **each** step of your calculations.

1 In this experiment you will carry out a titration to determine the relative formula mass of a hydrated salt, **FA 1**.

FA 1 is a hydrated salt.

FA 2 is dilute sulfuric acid.

FA 3 is 0.0200 mol dm⁻³ potassium manganate(VII).

(a) Method

Preparing a solution of FA 1

- Weigh the stoppered container of **FA 1**. Record the mass in the space below.
- Tip all the **FA 1** into the beaker.
- Reweigh the container with its stopper. Record the mass.
- Calculate and record the mass of FA 1 used.
- Add approximately 100 cm³ of **FA 2** to the **FA 1** in the beaker.
- Stir the mixture until all the FA 1 has dissolved.
- Transfer this solution into the 250 cm³ volumetric flask.
- Rinse the beaker and glass rod with distilled water and transfer the washings to the volumetric flask.
- Make up the solution in the volumetric flask to the mark using distilled water.
- Shake the flask thoroughly.
- This solution of the hydrated salt is **FA 4**. Label the flask **FA 4**.

Titration

- Fill the burette with FA 3.
- Pipette 25.0 cm³ of FA 4 into a conical flask.
- Use the 25.0 cm³ measuring cylinder to add 10 cm³ of **FA 2** to the **FA 4** in the conical flask.
- Perform a rough titration and record your burette readings in the space below.

		•	Carry out as many accurate titrations as you think necessary to obtain consistent results. Make sure any recorded results show the precision of your practical work.
I		•	Record in a suitable form below all of your burette readings and the volume of FA 3 added in each accurate titration.
II			Keep FA 3 and FA 4 for use in Question 3.
III			Roop 1700 and 1701 for doo in Quostion of
IV			
V			
VI			
VII			
VIII			[8]
	(b)	in y	m your accurate titration results, obtain a suitable value for the volume of FA 3 to be used our calculations. by clearly how you obtained this value.
			25.0 cm ³ of FA 4 required cm ³ of FA 3 . [1]
	(c)	Cal	culations
		(i)	Calculate the number of moles of potassium manganate(VII) present in the volume of ${\bf FA~3}$ calculated in ${\bf (b)}$.
			moles of KMnO ₄ = mol [1]
		(ii)	1 mol of KMnO ₄ reacts with 5 mol of the hydrated salt, FA 1 .
			Calculate the concentration of the hydrated salt, in mol dm ⁻³ , in FA 4 .
			concentration of FA 4 = mol dm ⁻³ [1]
		(iii)	Use your answer to (c)(ii) , and your data on page 2, to calculate an experimentally determined value for the relative formula mass of the hydrated salt, FA 1 . Show your working.

© UCLES 2020 9701/31/M/J/20 **[Turn over**

 M_{r} of **FA 1** =[1]

[Total: 12]

2 In this experiment you will determine the enthalpy change of solution for anhydrous sodium carbonate.

FA 5 is anhydrous sodium carbonate, Na₂CO₃. (You are given approximately 11 g.)

(a) Method

Experiment 1

- Weigh a cup. Record the mass.
- Transfer 4.0–4.2g of **FA 5** from the container into the cup.
- Reweigh and record the mass of the cup with **FA 5**.
- Calculate and record the mass of FA 5 used.
- Support the cup in the 250 cm³ beaker.
- Pour 30 cm³ of distilled water into the 50 cm³ measuring cylinder.
- Measure and record the temperature of the distilled water in the measuring cylinder.
- Add the 30 cm³ of distilled water to the **FA 5** in the cup.
- Stir constantly until the maximum temperature is reached.
- Measure and record the maximum temperature.
- Calculate and record the temperature rise.

Experiment 2

- Repeat **Experiment 1** but this time use 5.0–5.2g of **FA 5** and the other cup.
- Record all data from both experiments in one table.

I	
II	
III	
IV	

[4]

(b) Calculations

(i) Calculate the energy produced during **Experiment 1**. (Assume that 4.2 J change the temperature of 1.0 cm³ of solution by 1.0 °C.)

energy produced = J [1]

(ii)	Calculate the number of moles of Na ₂ CO ₃ used in Experiment 1 .
	moles of $Na_2CO_3 = \dots mol$ [1]
(iii)	Use your answers to (b)(i) and (b)(ii) to calculate the enthalpy change, in kJ mol ⁻¹ , for the reaction below. Show your working.
	$Na_2CO_3(s) + aq \rightarrow Na_2CO_3(aq)$
	-23(-1)
	enthalpy change = kJ mol ⁻¹
	sign value [1]
(c) (i)	A student suggested that by using the same thermometer, quantities of FA 5 , and water, a more accurate value for the temperature rise could be calculated.
	Suggest how the student could obtain a more accurate measurement.
	[1]
(ii)	State the maximum error in a single thermometer reading in your experiment in (a).
	maximum error =
	Hence calculate the maximum percentage error in the measurement of the temperature rise in Experiment 2 .
	% error =[2]
	[Total: 10]

Qualitative Analysis

Where reagents are selected for use in a test, the **name** or **correct formula** of the element or compound must be given.

At each stage of any test you are to record details of the following:

- colour changes seen
- the formation of any precipitate and its solubility in an excess of the reagent added
- the formation of any gas and its identification by a suitable test.

You should indicate clearly at what stage in a test a change occurs.

If any solution is warmed, a **boiling tube** must be used.

Rinse and reuse test-tubes and boiling tubes where possible.

No additional tests for ions present should be attempted.

- **3** (a) FA 6 is a hydrated salt. It contains two cations and one anion, all of which are listed in the Qualitative Analysis Notes.
 - (i) Describe and carry out tests to identify the cations in FA 6.

Record your tests and observations in the space below.

The cations in FA 6 are	and
	[5]

(ii) The anion in **FA 6** is a sulfite, sulfate or a halide.

	Carry out a test to identify the anion in FA 6 . Record your tests and observations in the space below.	
	The anion in FA 6 is	[2]
(iii)	Give the ionic equation for one reaction you have carried out in (a)(i) or (a)(ii) . Include state symbols.	
		[1]
(iv)	The formula of FA 6 is XY ₂ Z ₂ • w H ₂ O where	
	 X and Y are the cations present and Z is the anion present w is the number of moles of water of crystallisation in the hydrated salt. 	
	The relative formula mass of this compound is 392.0.	
	Using your conclusions from $(a)(i)$ and $(a)(ii)$, calculate the value of w , the number moles of water of crystallisation.	of
	w =	[2]

(b) FA 7 and FA 8 are aqueous solutions of covalently bonded compounds.

Half fill the beaker with water and place it on a tripod and gauze. Heat until the water begins to boil and then turn off the Bunsen burner. This will be used as a hot water bath.

(i) Complete the table by carrying out the tests described.Use a 1 cm depth of FA 7 or FA 8 in a test-tube for each test.

toot	obs	ervation(s)
test	FA 7	FA 8
Test 1 Add an equal volume of dilute sulfuric acid and a few drops of FA 3, aqueous acidified potassium manganate(VII), then		
place in the hot water bath for several minutes.		
Test 2 Add an equal volume of dilute sulfuric acid and an equal volume of aqueous potassium iodide, then		
add a few drops of aqueous starch.		
Test 3 Add an equal volume of aqueous iodine, then add aqueous sodium hydroxide until no further change occurs. Leave the tube to stand.		
Test 4 Add a few drops of FA 4, then		
add aqueous ammonia.		

(ii)	FA 8 contains an organic compound.
	From your observation(s), suggest one possible identity for this compound. Explain your answer.
	name
	reason
	[2]
(iii)	State the type of reagent FA 7 acts as in its reaction with aqueous potassium iodide. Explain your answer.
	[1]
	[Total: 18]

Qualitative Analysis Notes

1 Reactions of aqueous cations

reaction with		tion with
ion	NaOH(aq)	NH ₃ (aq)
aluminium, A <i>l</i> ³+(aq)	white ppt. soluble in excess	white ppt. insoluble in excess
ammonium, NH ₄ +(aq)	no ppt. ammonia produced on heating	_
barium, Ba ²⁺ (aq)	faint white ppt. is nearly always observed unless reagents are pure	no ppt.
calcium, Ca ²⁺ (aq)	white ppt. with high [Ca ²⁺ (aq)]	no ppt.
chromium(III), Cr³+(aq)	grey-green ppt. soluble in excess	grey-green ppt. insoluble in excess
copper(II), Cu ²⁺ (aq)	pale blue ppt. insoluble in excess	blue ppt. soluble in excess giving dark blue solution
iron(II), Fe²+(aq)	green ppt. turning brown on contact with air insoluble in excess	green ppt. turning brown on contact with air insoluble in excess
iron(III), Fe³+(aq)	red-brown ppt. insoluble in excess	red-brown ppt. insoluble in excess
magnesium, Mg²+(aq)	white ppt. insoluble in excess	white ppt. insoluble in excess
manganese(II), Mn²+(aq)	off-white ppt. rapidly turning brown on contact with air insoluble in excess	off-white ppt. rapidly turning brown on contact with air insoluble in excess
zinc, Zn²+(aq)	white ppt. soluble in excess	white ppt. soluble in excess

2 Reactions of anions

ion	reaction
carbonate, CO ₃ ²⁻	CO ₂ liberated by dilute acids
chloride, Cl ⁻ (aq)	gives white ppt. with Ag ⁺ (aq) (soluble in NH ₃ (aq))
bromide, Br ⁻ (aq)	gives cream ppt. with Ag ⁺ (aq) (partially soluble in NH ₃ (aq))
iodide, I ⁻ (aq)	gives yellow ppt. with Ag ⁺ (aq) (insoluble in NH ₃ (aq))
nitrate, NO ₃ -(aq)	NH ₃ liberated on heating with OH ⁻ (aq) and A <i>l</i> foil
nitrite, NO ₂ ⁻ (aq)	NH ₃ liberated on heating with OH ⁻ (aq) and A <i>l</i> foil
sulfate, SO ₄ ²⁻ (aq)	gives white ppt. with Ba ²⁺ (aq) (insoluble in excess dilute strong acids)
sulfite, SO ₃ ²⁻ (aq)	gives white ppt. with Ba ²⁺ (aq) (soluble in excess dilute strong acids)

3 Tests for gases

gas	test and test result
ammonia, NH ₃	turns damp red litmus paper blue
carbon dioxide, CO ₂	gives a white ppt. with limewater (ppt. dissolves with excess CO ₂)
chlorine, Cl ₂	bleaches damp litmus paper
hydrogen, H ₂	'pops' with a lighted splint
oxygen, O ₂	relights a glowing splint
