

Table 1.1 for Question 1

## Risk assessment of hazards

<b>description of the hazard</b>	<b>chance of the hazard happening</b> 1 (little chance) to 5 (greatest chance)	<b>how severe the impacts would be</b> 1 (little danger) to 5 (very dangerous)	<b>risk from the hazard</b> (chance of it happening × how severe the impacts would be)	<b>management</b> (what can be done to reduce the risk)
volcano erupts	1	5	5	check volcanic activity before setting off
wild animals	2	3	6	do not disturb or go close to them
extreme weather	4	4	16	check the weather forecast before setting off
hypothermia from getting cold and wet	3	4	12	
uneven ground and slippery rocks	2	2	4	
getting lost or separated from others	2	3	6

Fieldwork equipment

**Table 1.2 for Question 1**  
**Results of vegetation cover measurements**

	site A at 3700 m above sea level			site B at 3780 m above sea level			site C at 3850 m above sea level		
	measurement 1 (%)	measurement 2 (%)	average (%)	measurement 1 (%)	measurement 2 (%)	average (%)	measurement 1 (%)	measurement 2 (%)	average (%)
bare rock	12	9	11	20	70	45	97	92	94
bare soil	40	61	50	60	9	35	0	2	1
sparse vegetation cover	14	4	9	3	6	4	3	5	4
medium vegetation cover	18	12	15	10	13	12	0	0.5	1
dense vegetation cover	16	14	15	7	2	4	0	0	0

Average percentage figures have been rounded up or down to whole numbers.

Fig. 1.3 for Question 1

## How the students measured infiltration

The students used a **plastic pipe** which they pushed into the ground to the same depth at each site. The students put a **ruler** which measured in millimetres inside the pipe. They poured water into the pipe up to a height of 120 mm. They recorded the water height in the pipe after 10 minutes, timed by a **stopwatch**.

Table 1.3 for Question 1

## Results of infiltration measurements

fall in water level at site A at 3700 m above sea level (mm)		fall in water level at site B at 3780 m above sea level (mm)		fall in water level at site C at 3850 m above sea level (mm)	
measurement 1	15	measurement 1	55	measurement 1	85
measurement 2	10	measurement 2	40	measurement 2	14
average	12.5	average	<b>47.5</b>	average	49.5

Residential areas in Hong Kong

Fig. 2.2 for Question 2

## Student survey recording sheet

Environmental quality survey					
Residential area:	The Peak	Mid-Levels	Central	(circle the area)	
	-2	-1	0	+1	+2
bad ←————→ good					
feature					
traffic congestion					
noise level					
air quality					
safety					
cleanliness					
vegetation					
amenities					
vandalism and graffiti					

Table 2.1 for Question 2

## Results of environmental quality survey

	The Peak	Mid-Levels	Central
traffic congestion	+2	-1	-2
noise level	+2	0	-2
air quality	+2	+1	-1
safety	+2	+1	-1
cleanliness	+1	-1	0
vegetation	+2	<b>+1</b>	-1
amenities	0	<b>+1</b>	+1
vandalism and graffiti	+2	<b>+2</b>	+1
total score	+13	+4	-5

Table 2.2 for Question 2

## Results of noise level measurements

residential area	measuring site	noise level (decibels)
The Peak	1	65
	2	71
	3	64
Mid-Levels	4	78
	5	75
	6	78
	7	77
Central	8	81
	9	80
	10	80
	11	80
	12	85

Table 2.3 for Question 2

## Results of traffic count

residential area		measuring site	number of vehicles
The Peak	edge of city ↑	1	60
		2	31
		3	72
Mid-Levels		4	69
		5	77
		6	91
		7	19
Central		8	80
		9	59
		10	<b>76</b>
		11	28
		12	49
	edge of CBD ↓		

Table 2.4 for Question 2

## Types of vehicles at three sites

vehicle category	The Peak (site 1)	Mid-Levels (site 5)	Central (site 10)
	percentage of vehicles (%)		
bicycle/motorbike	14	9	3
car	41	45	43
taxi	39	11	14
bus/coach	1	<b>9</b>	6
van/lorry/truck	5	<b>26</b>	34
