READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

Practical notes are provided on page 8.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 6 printed pages and 2 blank pages.

You are going to investigate the reaction between potassium hydrogen carbonate and two aqueous solutions of dilute hydrochloric acid of different concentrations, labelled **F** and **G**.

For Examiner's Use

Read all the instructions below carefully before starting the experiments.

Instructions

You are going to carry out two experiments.

(a) Experiment 1

Use a measuring cylinder to pour 20 cm³ of distilled water into a conical flask. Add a 0.3 g sample of potassium hydrogen carbonate to the conical flask and shake the flask to dissolve the solid.

Add five drops of methyl orange indicator to the conical flask.

Fill the burette provided up to the 0.0 cm³ mark with the solution **F** of dilute hydrochloric acid. Add acid **F** from the burette 1 cm³ at a time, while shaking the flask, until the solution just changes colour. Record the burette readings in the table below and complete the table.

(b) Experiment 2

Empty the conical flask and rinse it with distilled water.

Pour away the contents of the burette and rinse the burette with the solution **G** of dilute hydrochloric acid.

Repeat Experiment 1, using solution **G** instead of solution **F**.

Record the burette readings in the table below and complete the table.

| | Experiment 1 | Experiment 2 |
|---------------------------------|--------------|--------------|
| final reading/cm ³ | | |
| initial reading/cm ³ | | |
| difference/cm ³ | | |

[6]

| (d) What type of chemical reaction occurs when hydrochloric acid reacts wit potassium hydrogen carbonate? (e) Complete the sentence below. Experiment needed the smallest volume of hydrochloric acid to change the color of the methyl orange. (f) (i) Compare the volumes of hydrochloric acid used in Experiments 1 and 2. (ii) The most concentrated solution of hydrochloric acid is solution | | 3 |
|--|-----|--|
| (d) What type of chemical reaction occurs when hydrochloric acid reacts wit potassium hydrogen carbonate? (e) Complete the sentence below. Experiment needed the smallest volume of hydrochloric acid to change the color of the methyl orange. (f) (i) Compare the volumes of hydrochloric acid used in Experiments 1 and 2. (ii) The most concentrated solution of hydrochloric acid is solution | (c) | , , |
| potassium hydrogen carbonate? (e) Complete the sentence below. Experiment needed the smallest volume of hydrochloric acid to change the color of the methyl orange. (f) (i) Compare the volumes of hydrochloric acid used in Experiments 1 and 2. (ii) The most concentrated solution of hydrochloric acid is solution | | from to |
| (e) Complete the sentence below. Experiment needed the smallest volume of hydrochloric acid to change the color of the methyl orange. (f) (i) Compare the volumes of hydrochloric acid used in Experiments 1 and 2. (ii) The most concentrated solution of hydrochloric acid is solution | (d) | potassium hydrogen carbonate? |

For Examiner's Use You are provided with two solids, **H** and **I**, which are both salts.

Carry out the following tests on each solid, recording all of your observations in the table.

Conclusions must not be written in the table.

| | tests | observations |
|--|--|--------------|
| tests on solid H Add all of H to about 10 cm ³ of distilled water in a test-tube and shake to dissolve. | | |
| Divide the solution into three equal portions in test-tubes, and carry out the following tests. | | |
| (a) | Describe the appearance of the solution. | [1] |
| | Add about 1 cm ³ of dilute hydrochloric acid to the first portion of the solution. | [1] |
| (b) | To the second portion of the solution, add drops of aqueous sodium hydroxide until a change is seen. | [2] |
| | Heat the mixture gently for two minutes and stir the mixture. Allow the mixture to settle. | [2] |
| | Remove the liquid with a teat pipette. Add about 2 cm ³ of dilute nitric acid to the solid and heat the mixture gently . | [1] |
| (c) | To the third portion of the solution, add drops of aqueous ammonia until a change is seen. | [2] |
| | Now add an excess of aqueous ammonia to the mixture. | |
| | | [2] |

For Examiner's Use

| tests | observations |
|---|------------------|
| tests on solid I | |
| (d) Place about half of solid I into a dry test-tube. Heat the test-tube gently, then strongly. Test the gas given off with a lighted splint. | [2] |
| Leave the test-tube to cool for five minutes and then add about 1 cm ³ of dilute hydrochloric acid to the test-tube. Test the gas with a lighted splint. | [2] |
| (e) Add the rest of solid I to about 2cm³ of dilute nitric acid in a test-tube. Warm the solution and smell the mixture. | [1] |
| (f) What conclusions can you draw about s | solid H ? |
| (g) What conclusions can you draw about s | [2] |
| | [2] |
| | |
| | [T-4-1, 00] |

NOTES FOR USE IN QUALITATIVE ANALYSIS

Test for anions

| anion | test | test result |
|---|--|--|
| carbonate (CO ₃ ²⁻) | add dilute acid | effervescence, carbon dioxide produced |
| chloride (Cl ⁻) [in solution] | acidify with dilute nitric acid, then add aqueous silver nitrate | white ppt. |
| iodide (I ⁻) [in solution] | acidify with dilute nitric acid, then add aqueous silver nitrate | yellow ppt. |
| nitrate (NO ₃ ⁻) [in solution] | add aqueous sodium hydroxide then aluminium foil; warm carefully | ammonia produced |
| sulfate (SO ₄ ²⁻) [in solution] | acidify with dilute nitric acid, then aqueous barium nitrate | white ppt. |

Test for aqueous cations

| cation | effect of aqueous sodium hydroxide | effect of aqueous ammonia |
|-------------------------------|--|--|
| aluminium (Al³+) | white ppt., soluble in excess giving a colourless solution | white ppt., insoluble in excess |
| ammonium (NH ₄ +) | ammonia produced on warming | _ |
| calcium (Ca ²⁺) | white ppt., insoluble in excess | no ppt., or very slight white ppt. |
| copper (Cu ²⁺) | light blue ppt., insoluble in excess | light blue ppt., soluble in excess giving a dark blue solution |
| iron(II) (Fe ²⁺) | green ppt., insoluble in excess | green ppt., insoluble in excess |
| iron(III) (Fe ³⁺) | red-brown ppt., insoluble in excess | red-brown ppt., insoluble in excess |
| zinc (Zn ²⁺) | white ppt., soluble in excess giving a colourless solution | white ppt., soluble in excess giving a colourless solution |

Test for gases

| gas | test and test results |
|-----------------------------------|----------------------------------|
| ammonia (NH ₃) | turns damp red litmus paper blue |
| carbon dioxide (CO ₂) | turns limewater milky |
| chlorine (Cl ₂) | bleaches damp litmus paper |
| hydrogen (H ₂) | 'pops' with a lighted splint |
| oxygen (O ₂) | relights a glowing splint |
