Paper 1

**March 2017**

MARK SCHEME

Maximum Mark: 75

---

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

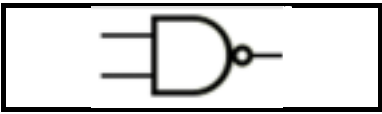

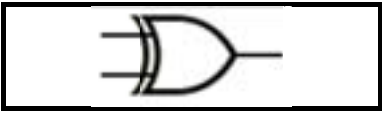

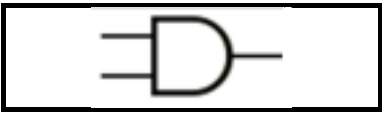

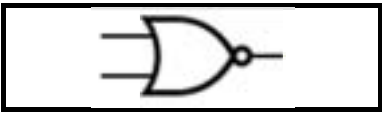

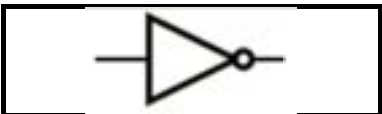

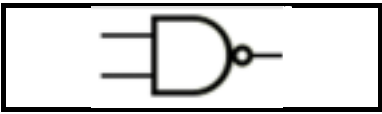

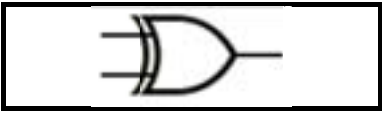

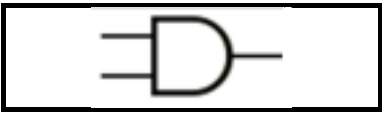

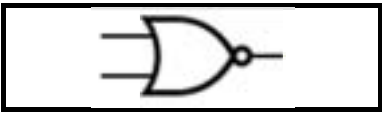

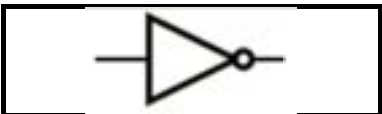

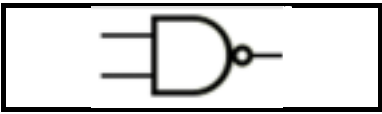

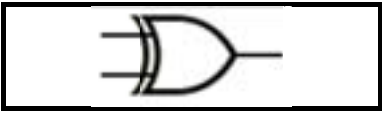

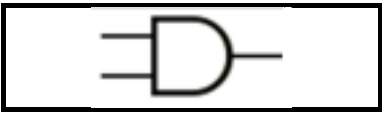

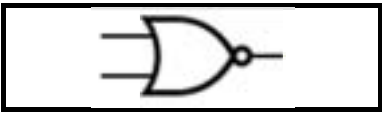

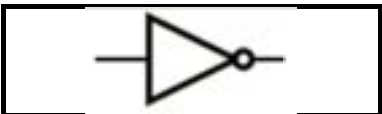

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the March 2017 series for most Cambridge IGCSE<sup>®</sup>, Cambridge International A and AS Level components and some Cambridge O Level components.

Function	Description													
<b>Interrupt</b>	Many processes appear to run simultaneously													
<b>Utility</b>	Data are temporarily held in a buffer waiting for an output device to access it													
<b>Memory management</b>	A signal that causes the operating system to take a specified action													
<b>Spooling</b>	A program that performs a specific task required for the operation of a computer system													
<b>Multitasking</b>	A process of assigning blocks of memory to programs running in a computer
