MARK SCHEME for the March 2015 series

0625 PHYSICS

0625/22

Paper 2 (Core Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the March 2015 series for most Cambridge IGCSE[®] components.

® IGCSE is the registered trademark of Cambridge International Examinations.

I	NOTES ABOUT MARK SCHEME SYMBOLS & OTHER MATT	FERS	
B marks	are independent marks, which do not depend on other marks scored, the point to which it refers must be seen specifically answer.		
M marks	are method marks upon which accuracy marks (A marks) la candidate fails to score a particular M mark, then none of th can be scored.	•	
C marks	are compensatory marks in general applicable to numerical be scored even if the point to which they refer are not writte candidate, provided subsequent working gives evidence have known it.	en down by t	he
A marks	A marks are accuracy or answer marks which either depen- which are one of the ways which allow a C mark to be score commonly awarded for final answers to numerical question answer, eligible for A marks, is correct, all the C marks for t normally awarded. An A mark following an M mark is a dep	ed. A marks s. If a final n hat questior	are umerical are
Brackets ()	Brackets around words or units in the mark scheme are interwording used to clarify the mark scheme, but the marks do the words or units in brackets, e.g. 10 (J) means that the marks regardless of the unit given.	not depend	on seeing
<u>Underlining</u>	Underlining indicates that this <u>must</u> be seen in the answer of very similar.	offered, or so	omething
OR / or	This indicates alternative answers or words, any one of whi scoring the marks.	ch is satisfa	ctory for
AND	Both answers or words must be given for credit to be award	led.	
e.e.o.o.	This means "each error or omission".		
o.w.t.t.e.	This means "or words to that effect".		
c.a.o.	This means "correct answer only".		
Not/NOT	This indicates that an incorrect answer is not to be disregar another otherwise correct alternative offered by the candida wrong penalty applies.		
e.c.f.	This means "error carried forward". If a candidate has made and has carried an incorrect value forward to subsequent s marks indicated by e.c.f. may be awarded, provided the sub correct, bearing in mind the earlier mistake. This prevents a penalised more than once for a particular mistake, but only annotated e.c.f.	tages of wor osequent wo a candidate f	king, orking is from being
Significant figures	Answers are normally acceptable to any number of significate exceptions to this general rule will be specified in the mark	•	2. Any

			Cambridge IGCSE – March 2015	0625	22
1	(a)	(for	rce of) gravity/gravitation OR (its) weight		B1
	(b)	abo	out the same		B1
	(c)		e straight line with positive gradient rting at origin		B1 B1
	(d)	are	a under graph		B1
					[Total: 5]
2	(a)	(i)	extension clearly marked on Fig. 2.1		B1
		(ii)	(vertical) rule drawn on Fig. 2.1		B1
	(b)	(dis	stance to) intercept on length axis clearly indicated		B1
	(c)	nev	vton OR N		B1
					[Total: 4]
3	(a)	(lou (dr <u>y</u> toa	ept viable alternatives in each case ud)speaker OR bell OR buzzer OR other suitable device y) cell OR battery ster OR electric fire/heater OR electric kettle OR other suitable devic tor OR named device containing a motor	ce	B1 B1 B1 B1
	(b)	(i)	total energy remains constant OR energy cannot be created or de o.w.t.t.e.	stroyed	B1
		(ii)	energy dissipated/transferred to surroundings/wires OR some ener wasted OR heating OR thermal energy OR increased internal ener		B1
			idea that 'wasted energy' o.w.t.t.e. = difference between input and output energies OR similar argument	useful	B1
					[Total: 7]
4	(a)	Y			B1
	(b)	XY			B1

Pa	age	5	Mark Scheme	Syllabus	Paper
			Cambridge IGCSE – March 2015	0625	22
	(c)		to X Itinuing straight on after lens		M1 A1
		ray	through correctly positioned principal focus on left of lens attinuing parallel to principal axis after lens		(M1) (A1)
		ima	age at intersection of candidate's ray with printed ray from A		B1
	(d)	at s	surface(s) (of lens)		B1
					[Total: 6]
5	(a)	(i)	1. X OR Y		B1
			2. Z		B1
		(ii)	C marked between incident/reflected ray and normal on Y		B1
	(b)	(i)	three straight line wavefronts drawn, no discontinuities and bent in direction	any	B1
			wavefronts bent down at boundary and closer together		B1
			refracted wavefronts parallel		B1
		(ii)	refraction		B1
					[Total: 7]
6	(a)	ech	no / reflection (of sound)		B1
	(b)	qui am	eter plitude AND changed		B1 B1
	(c)	(i)	stopwatch/stopclock/millisecond timer		B1
		(ii)	distance ÷ time in any form e.g. 480 ÷ 3 960 ÷ 3 OR evidence that double distance used or time halved 320 (m/s) c.a.o.		C1 C1 A1
					[Total: 7]
7	(a)	pot	ential difference		B1
	(b)	(i)	charge		B1
		(ii)	1. 36 (Ω)		B1

P	age	6	Mark Scheme	Syllabus	Paper
			Cambridge IGCSE – March 2015	0625	22
			 2. V = IR in any form OR V ÷ R 12 ÷ 36 e.c.f. from 1. 0.3 OR 0.33 A OR amp(s) OR ampere(s) 		C1 C1 A1 B1
		(iii)	0.33 × 18 5.94(V) OR 6 (V)		C1 A1
	(c)		ne lamp fails both go out OR cannot control lamps independently OF as bright	R lamps	B1
					[Total: 10]
8	(a)	(i)	any clear example of useful expansion, e.g. thermometer, bimetalli fitting metal tyre	c strip,	B1
			relevant point relating to stated example		B1
		(ii)	any clear example where expansion causes problem e.g. overhead bridges, railway tracks	d cables,	B1
			relevant point relating to stated example		B1
	(b)		rate less OR move more slowly ve closer together (on average)		B1 B1
	(c)	(i)	balloons get larger/expand		B1
		(ii)	any three from: space between molecules/atoms/particles increases molecules/atoms/particles move faster relevant mention of collisions with balloon wall pressure increases pressure/force on inside of walls becomes greater than on outside		B3
					[Total: 10]
9	(a)	-	/ four from: erence to magnetic field		B4
		win cur for cur for	e cuts (magnetic field (lines) rent perpendicular to field (lines) ce(s) on (sides of) coil OR turning effect rent in opposite directions (in two long wires) ce/turning effect opposite direction on two (long) sides ce perpendicular to current / force perpendicular to field		
	(b)	inc	rease number of turns OR increase current OR increase strength of	magnet	B1
					[Total: 5]
