CAMBRIDGE INTERNATIONAL EXAMINATIONS

Cambridge International General Certificate of Secondary Education

MARK SCHEME for the October/November 2015 series

0625 PHYSICS

0625/32	Paper 3 (Extended Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2015 series for most Cambridge IGCSE®, Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is the registered trademark of Cambridge International Examinations.

NOTES ABOUT MARK SCHEME SYMBOLS & OTHER MATTERS

B marks   are independent marks, which do not depend on other marks. For a B mark to be scored, the point to which it refers must be seen specifically in the candidate's answer.

M marks   are method marks upon which accuracy marks (A marks) later depend. For an M mark to be scored, the point to which it refers **must** be seen in a candidate's answer. If a candidate fails to score a particular M mark, then none of the dependent A marks can be scored.

C marks   are compensatory marks in general applicable to numerical questions. These can be scored even if the point to which they refer are not written down by the candidate, **provided subsequent working gives evidence that they must have known it.** For example, if an equation carries a C mark and the candidate does not write down the actual equation but does correct substitution or working which shows he knew the equation, then the C mark is scored. A C mark is not awarded if a candidate makes two points which contradict each other. Points which are wrong but irrelevant are ignored.

A marks   A marks are accuracy or answer marks which either depend on an M mark, or which are one of the ways which allow a C mark to be scored. A marks are commonly awarded for final answers to numerical questions. If a final numerical answer, eligible for A marks, is correct, with the correct unit and an acceptable number of significant figures, all the marks for that question are normally awarded. It is very occasionally possible to arrive at a correct answer by an entirely wrong approach. In these rare circumstances, do not award the A marks, but award C marks on their merits. An A mark following an M mark is a dependent mark.

Brackets ( ) around words or units in the mark scheme are intended to indicate wording used to clarify the mark scheme, but the marks do not depend on seeing the words or units in brackets, e.g. 10 (J) means that the mark is scored for 10, regardless of the unit given.

Underlining   indicates that this <u>must</u> be seen in the answer offered, or something very similar.

OR/or   indicates alternative answers, any one of which is satisfactory for scoring the mark.

e.e.o.o.   means "each error or omission".

o.w.t.t.e.   means "or words to that effect".

Spelling   Be generous about spelling and use of English. If an answer can be understood to mean what we want, give credit. However, do not allow ambiguities, e.g. spelling which suggests confusion between reflection / refraction / diffraction or thermistor / transistor / transformer.

Ignore   indicates that something which is not correct or is irrelevant is to be disregarded and does not cause a right plus wrong penalty.

Not/NOT   indicates that an incorrect answer is not to be disregarded, but cancels another otherwise correct alternative offered by the candidate, i.e. right plus wrong penalty applies.

cao   correct answer only

AND   indicates that both answers are required to score the mark.

ecf — meaning "error carried forward" is mainly applicable to numerical questions, but may in particular circumstances be applied in non-numerical questions. This indicates that if a candidate has made an earlier mistake and has carried an incorrect value forward to subsequent stages of working, marks indicated by ecf may be awarded, provided the subsequent working is correct, bearing in mind the earlier mistake. This prevents a candidate being penalised more than once for a particular mistake, but **only** applies to marks annotated ecf.

Significant Figures — Answers are normally acceptable to any number of significant figures ≥ 2. Any exceptions to this general rule will be specified in the mark scheme.

Units — Deduct one mark for each incorrect or missing unit from an answer that would otherwise gain all the marks available for that answer: maximum 1 per question. No deduction is incurred if the unit is missing from the final answer but is shown correctly in the working. Condone wrong use of upper and lower case symbols, e.g. pA for Pa.

Fractions — Only accept these where specified in the mark scheme.

1 (a) (i) (it/comet) travels in a straight line   **B1**

    (ii) area (under graph) OR s = vt in any form OR vt   **C1**
            220 000 m OR 220 km   **A1**

(b) negative acceleration OR deceleration OR (it/the comet) is slowing down   **B1**
     acceleration/deceleration (only accept **it** if acc/decel already mentioned)
     not constant allow either increasing or decreasing   **B1**

(c) attempt at gradient OR (a =) $\Delta v/\Delta t$ OR (0–)12 000/2.0 OR other correct values for $\Delta v/\Delta t$ **C1**
     (–)6000 m/s^2 tolerance 5000 – 7000 m/s^2 **A1**

(d) (it/comet) hits surface (of planet)
     OR stops o.w.t.t.e.   **B1**

                                                        [Total: 8]

2 (a) d = m/V in any form OR (V =) m/d OR 200/8.4   **C1**
     24 cm^3 **A1**

(b) (i) density less (than water) OR upthrust ≥ weight   **B1**

    (ii) determine any volume of any liquid (V_1)   **B1**
         states viable method to submerge wood   **B1**
         reads volume (V_2) from previous line and determines volume
         of (wood + brass) ($V_2 - V_1$)   **B1**
         subtract volume of brass from above (to give volume of wood)   **B1**

                                                          [Total: 7]

3 (a) (i) (power =) work (done)/time (taken) OR energy (supplied)/time (taken) OR rate of doing
         work OR rate of supplying energy   **B1**

    (ii) box 2 (force acting on the object) AND box 5 (distance moved by the object)   **B1**

(b) (i) multiplies mass of <u>all passengers</u> by h   **C1**
         (increase in gpe =) mgh OR uses 12 × 650 × 150   **C1**
         (power = increase in) gpe/time   **C1**
         1.8×10^4 W OR 18 kW   **A1**

    (ii) energy to raise the lift OR weight/load/mass of lift OR more weight/load/mass   **B1**

                                                          [Total: 7]

4 **(a)** 2 vectors correct direction AND relative length by eye B1
correct triangle OR rectangle with resultant on correct diagonal B1
7.2 kN tolerance 7.0 – 7.4 kN B1

(b) (i) (moment =) force × distance C1
(moment = 11 000 × 1.8 =) 20 kNm A1

(ii) (moment of weight = 19 000 x 1.25 =) 24 (kNm) B1
correct statement based on <u>two moments seen</u> B1

[Total: 7]

5 **(a)** in all parts accept by implication reference to X
e.g. in (i) accept "it covers a greater range of temperature"

(i) X covers greater range of <u>temperature</u> OR (goes to) higher temperature OR greater
range expressed numerically B1

(ii) liquid in X expands uniformly (with temperature rise) B1

(iii) (for the same temperature rise,) the liquid in X expands more B1

(b) (i) two junctions correctly connected to each other and to meter OR one junction between
wires and other junction at connection to meter M1
temperature difference between junctions A1
two wires correctly labelled as made of different materials, accept labels metal A &
metal B NOT 3 different metals labelled B1

(ii) junction (in liquid) has low mass / small heat capacity / small size B1
temperature of junction reacts quickly / quickly reaches temperature of
liquid / heat or cools faster B1

[Total: 8]

6 **(a)** suitable particles and fluid, and <u>labelled</u>, in suitable container
e.g. pollen and water (surface), smoke in air M1
microscope AND, if smoke used, illumination A1

(b) movement of particles NOT atoms or molecules B1
reasonable description of movement
OR any mention / clear description of movement in different directions
accept if diagram drawn B1

(c) collisions between molecules and particles B1
random movement of molecules OR causes (random) motion of particles B1

[Total: 6]

7 (a) pressure high / increased OR molecules / particles close(r / st together)   B1

(b) (i) 1.7 m   B1

    (ii) v = f λ in any form OR (f =) v/λ OR 5/0.025   C1
        200 Hz   A1

(c) <u>three</u> compressions at 23° – 33° to wall   B1
    constant and correct wavelength by eye
    only scored if at 8° – 48° to wall   B1

(d) (wavelength) greater   B1
    change of speed correctly related to change of wavelength   B1

[Total: 8]

8 (a) (i) correct O label   B1

    (ii) correct I label   B1

    (iii) correct F label, allow correctly labelled dot to left of lens   B1

    (iv) correct arrows on both rays, anywhere on each ray   B1

(b) 1/n = sin i/sin r OR n = sin i/sin r in any form OR sin i/n OR n sin i   C1
    (r = sin^{-1} ((sin 35)/1.5) =) 22°
    accept if in diagram   A1
    emergent ray drawn with 27° ≥ r ≥ 18°   B1

[Total: 7]

9 (a) (i) NAND   B1

    (ii) output and one input correctly labelled   B1

(b) rectangle with longitudinal line in middle third, no input or output wire required   B1

(c) (i) temperature (decreases)   B1

    (ii) correctly relates change of resistance to change of temperature   B1
    voltage of mid-point (of potential divider) / left of LED increases OR higher V across
    thermistor   B1
    current flows through / enough V to light LED   B1

(d) $1/R_p = 1/R_1 + 1/R_2$ or $(R_p) = R_1R_2/(R_1 + R_2)$ C1

$(R = 1/(1/4 - 1/6) =)$ 12 Ω   A1

[Total: 9]

10 (a) ≥ 3 horizontal lines in gap by eye   B1

≥ 4 evenly spaced horizontal lines filling ¾ of width of gap AND arrows L to R   B1

(b) (i) ammeter deflects / gives a reading OR registers a current   B1

wire <u>cuts</u> the field lines o.w.t.t.e.   M1

e.m.f. / voltage / current <u>induced</u> / <u>produced</u> / <u>generated</u>   A1

(ii) 1 reading / deflection / current increased   B1

2 reading / deflection / current reversed ignore magnitude   B1

[Total: 7]

11 (a) (i) 800 counts / s   B1

(ii) ¼ of **(i)**   B1

(b) sample 1 γ B1

sample 2 β NOT γ as extra   B1

sample 3 α NOT extras   B1

(c) α B1

[Total: 6]
