

Cambridge IGCSE™

COMBINED SCIENCE**0653/42**

Paper 4 Theory (Extended)

February/March 2024

MARK SCHEME

Maximum Mark: 80

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the February/March 2024 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

This document consists of **10** printed pages.

PUBLISHED**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptions for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Science-Specific Marking Principles

1 Examiners should consider the context and scientific use of any keywords when awarding marks. Although keywords may be present, marks should not be awarded if the keywords are used incorrectly.

2 The examiner should not choose between contradictory statements given in the same question part, and credit should not be awarded for any correct statement that is contradicted within the same question part. Wrong science that is irrelevant to the question should be ignored.

3 Although spellings do not have to be correct, spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. ethane / ethene, glucagon / glycogen, refraction / reflection).

4 The error carried forward (ecf) principle should be applied, where appropriate. If an incorrect answer is subsequently used in a scientifically correct way, the candidate should be awarded these subsequent marking points. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

5 'List rule' guidance

For questions that require *n* responses (e.g. State **two** reasons ...):

- The response should be read as continuous prose, even when numbered answer spaces are provided.
- Any response marked *ignore* in the mark scheme should not count towards *n*.
- Incorrect responses should not be awarded credit but will still count towards *n*.
- Read the entire response to check for any responses that contradict those that would otherwise be credited. Credit should **not** be awarded for any responses that are contradicted within the rest of the response. Where two responses contradict one another, this should be treated as a single incorrect response.
- Non-contradictory responses after the first *n* responses may be ignored even if they include incorrect science.

6 Calculation specific guidance

Correct answers to calculations should be given full credit even if there is no working or incorrect working, **unless** the question states 'show your working'.

For questions in which the number of significant figures required is not stated, credit should be awarded for correct answers when rounded by the examiner to the number of significant figures given in the mark scheme. This may not apply to measured values.

For answers given in standard form (e.g. $a \times 10^n$) in which the convention of restricting the value of the coefficient (a) to a value between 1 and 10 is not followed, credit may still be awarded if the answer can be converted to the answer given in the mark scheme.

Unless a separate mark is given for a unit, a missing or incorrect unit will normally mean that the final calculation mark is not awarded. Exceptions to this general principle will be noted in the mark scheme.

7 Guidance for chemical equations

Multiples / fractions of coefficients used in chemical equations are acceptable unless stated otherwise in the mark scheme.

State symbols given in an equation should be ignored unless asked for in the question or stated otherwise in the mark scheme.

Question	Answer	Marks
1(a)(i)	liver labelled ;	1
1(a)(ii)	pancreas ;	1
1(b)	pieces ; molecules ;	2
1(c)	digest / breakdown, starch ; into (simpler) sugars ;	2
1(d)	<i>enzyme: A</i> AND works (best) at low pH / acidic conditions ; gastric juice, contains hydrochloric acid / is acidic ;	2

Question	Answer	Marks
2(a)(i)	helium ;	1
2(a)(ii)	potassium ;	1
2(a)(iii)	iron ;	1
2(a)(iv)	aluminium ;	1
2(b)	6 electrons shared between the two nitrogens ; lone pair in each of the N atoms ;	2
2(c)	nitrogen is, covalent / (simple) molecular and potassium nitrate is, ionic / contains ions / has a lattice structure ; strong(er) attractive forces in potassium nitrate / weak(er) attractive forces in nitrogen ; more energy needed to overcome or break the attractive forces / bonds, in potassium nitrate ; ORA	3

Question	Answer	Marks
3(a)	speed = distance ÷ time / $4.5 \times 10^8 \div 2.0 \times 10^5$; (conversion hours to days) $2250 \div 24$; (= 94 / 93.8 / 93.75 days)	2
3(b)	white ; shiny ;	2
3(c)(i)	visible (light) and infrared ;	1
3(c)(ii)	800 nm seen / states idea that minimum frequency has longest wavelength ; $f = 3.0 \times 10^8 \div (800 \times 10^{-9})$; $= 3.8 \times 10^{14}$ (Hz) ;	3

Question	Answer	Marks
4(a)	root and stem labels are the wrong way around ; xylem label incorrect in leaf ;	2
4(b)	<i>any three from:</i> (description of trend) increased humidity causes decrease in rate of transpiration / ref to inverse relationship between humidity and transpiration rate ; higher humidity means higher water (vapour) concentration in air (surrounding the leaf) ; the idea that at higher humidity the concentration gradient between the leaf and the air is reduced ; reference to reduced, evaporation / diffusion (from leaf at higher humidity) ;	3
4(c)(i)	$6\text{CO}_2 + 6 \text{H}_2\text{O}$; $\text{C}_6\text{H}_{12}\text{O}_6 + 6\text{O}_2$;	2
4(c)(ii)	chloroplast ;	1

Question	Answer			Marks
4(d)	organism	trophic level	feeding relationship	3
	musk ox	2	(gets its energy by eating) grass	
	snowy owl	3 and 4	(gets its energy by eating) (Arctic) fox and (Arctic) hare	
<i>correct trophic levels = [1] grass = [1] (Arctic) fox and (Arctic) hare = [1]</i>				...

Question	Answer	Marks
5(a)(i)	(molten because) ions must, be free to move / be mobile / migrate ;	1
5(a)(ii)	(so that they) do not react / only provide a surface for electron transfer (to or from ions) ;	1
5(a)(iii)	gain of electrons by, cations / (zinc) ions ;	1
5(b)	chlorine + potassium bromide \rightarrow ; (\rightarrow or = required) potassium chloride + bromine ;	2
5(c)	(molecule made of) two atoms, combined / bonded ;	1
5(d)	$Cl_2 + H_2 \rightarrow 2HCl$; <i>reactants and products [1] balanced [1]</i>	2

Question	Answer	Marks
6(a)(i)	(nuclear) fusion ;	1

Question	Answer	Marks
6(a)(ii)	(nuclear) fission ;	1
6(a)(iii)	idea that in fusion energy is released by joining (of nuclei) and in fission energy is released by splitting (of nuclei) ;	1
6(b)	$P = V \times I / 240 \times 8.0$; 1920 (W) / conversion W to kW seen ; 1.9 (kW) ;	3
6(c)(i)	(electric) motor ;	1
6(c)(ii)	use of current from source = sum of currents in branches ; current in motor = $14.7 - 13.0 - 0.2 = 1.5$ (A) ;	2
6(c)(iii)	the idea that the total resistance in the circuit increases (and as the potential difference stays the same) so total current decreases ;	1

Question	Answer	Marks										
7(a)	<table border="1"> <tbody> <tr> <td>absence of a nucleus</td> <td>N</td> </tr> <tr> <td>contains an energy store</td> <td>E</td> </tr> <tr> <td>has a flagellum for movement</td> <td>S</td> </tr> <tr> <td>has a jelly coating</td> <td>E</td> </tr> <tr> <td>large numbers released at any one time</td> <td>S</td> </tr> </tbody> </table> <p>5 correct = [3] 3–4 correct = [2] 1–2 correct = [1]</p>	absence of a nucleus	N	contains an energy store	E	has a flagellum for movement	S	has a jelly coating	E	large numbers released at any one time	S	3
absence of a nucleus	N											
contains an energy store	E											
has a flagellum for movement	S											
has a jelly coating	E											
large numbers released at any one time	S											

Question	Answer	Marks
7(b)	(dissolved) nutrients / oxygen, pass (from the mother's blood across placenta) to fetus ; waste products pass from fetus (to mother across placenta) ; placenta provides a barrier to toxins ;	3
7(c)	carbon monoxide ; reduces oxygen uptake (into blood / cells / body) / binds to haemoglobin ; OR tar ; causes, lung cancer / bronchitis / emphysema ;	2

Question	Answer	Marks
8(a)(i)	fractional and distillation ;	1
8(a)(ii)	<i>refinery gas</i> : smaller molecules ; more volatile ; ORA	2
8(b)	(family of compounds with): same general formula ; similar chemical properties ;	2
8(c)(i)	C ₂ H ₄ ;	1
8(c)(ii)	<i>any two from</i> : high temperature / 400–700 °C ; high pressure / 60–70 atmosphere ; catalyst ;	2
8(c)(iii)	contains only single (C-C) (covalent) bonds / does not contain double (C=C) (covalent) bonds ;	1

Question	Answer	Marks
9(a)(i)	S ;	1
9(a)(ii)	<u>speed</u> ;	1
9(b)(i)	reference to the need to calculate the area under graph OR one area calculated ; (calculation of area under graph $t = 0$ to $t = 250$ s) $\frac{1}{2} \times 100 \times 4.8 + 150 \times 4.8 / 960$; (add in $\frac{1}{2} (\frac{1}{2} \times 100 \times 4.8) / 120$ for area under curve) total = 1100 / 1080 (m) ;	3
9(b)(ii)	time at max. speed of 4.8 m/s = 150s ; and $\Delta E = 2.0 \times 150$; (300kJ)	2
9(b)(iii)	KE of boat = $\frac{1}{2} mv^2$ in any form ; KE = $\frac{1}{2} \times 450 \times 4.8^2 = 5200$ (J) = 5.2 (kJ) ;	2
