Paper 4 A Level Structured Questions

October/November 2019

MARK SCHEME

Maximum Mark: 100

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2019 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **14** printed pages.

PUBLISHED**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

PUBLISHED**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Mark scheme abbreviations

;	separates marking points
/	alternative answers for the same point
R	reject
A	accept (for answers correctly cued by the question, or by extra guidance)
AW	alternative wording (where responses vary more than usual)
underline	actual word given must be used by candidate (grammatical variants accepted)
max	indicates the maximum number of marks that can be given
ora	or reverse argument
mp	marking point (with relevant number)
ecf	error carried forward
I	ignore
AVP	alternative valid point

Question	Answer	Marks
1(a)(i)	Q – <u>receptor</u> ;	1
1(a)(ii)	R – proton / hydrogen ion / H ⁺ , pump / carrier ; S – calcium (ion) / Ca ²⁺ , channel (protein) ;	2
1(a)(iii)	T – cell surface membrane / plasma membrane / plasmalemma ;	1
1(b)	<i>any five from:</i> 1 ABA / abscisic acid, binds / attaches, to receptor ; 2 calcium ions enter cell ; 3 (Ca ²⁺ is) second messenger ; 4 proton / hydrogen ion / H ⁺ , exit, stops / is inhibited ; 5 potassium ions / K ⁺ , leave (cell) ; 6 water potential / ψ , increases (in, cell / cytoplasm) ; 7 water leaves (cell), by osmosis OR down, ψ / osmotic, gradient ; 8 cell, volume decreases / becomes flaccid / loses turgidity / loses turgor ;	5

Question	Answer	Marks
2(a)	two homologous chromosomes circled ;	1
2(b)(i)	<i>any three from:</i> 1 same, size / length / number of (kilo)base pairs ; 2 same shape ; 3 same banding pattern ; 4 same (order of), genes / loci ; 5 they, pair up / form a bivalent, in, prophase 1 / meiosis 1 ;	3
2(b)(ii)	20 ;	1
2(c)(i)	<i>any two from:</i> 1 <i>ref. to</i> <u>reduction</u> division ; 2 halves the chromosome number ; 3 (so) fertilisation / fusion of gametes, gives, diploid / 2n / 40 ; 4 prevents chromosome <u>number</u> doubling (each generation) ;	2
2(c)(ii)	1 (by chance) both gametes (may) have recessive allele ; 2 zygote / offspring, has, pair / two / homozygous, <u>recessive</u> alleles ;	2
2(d)(i)	<i>any two from:</i> 1 (causes a) STOP codon ; 2 does not code for <u>amino acid</u> / no <u>amino acid</u> added to chain ; 3 stops <u>translation</u> OR rest of / later, codons / triplets / mRNA / sequence, not <u>translated</u> ;	2
2(d)(ii)	<p><i>parental genotypes</i></p> <p style="text-align: center;">Aa X Aa</p> <p style="text-align: center;">and</p> <p><i>gametes</i></p> <p style="text-align: center;">A a A a ;</p> <p><i>offspring genotypes</i></p> <p style="text-align: center;">AA Aa (Aa) aa ;</p> <p><i>offspring phenotypes</i></p> <p style="text-align: center;">normal normal (normal) woolly ;</p>	3

Question	Answer	Marks
3(a)	(10 – 5) / 5 × 100 ; 100 ;	2
3(b)	<u>restriction</u> , enzyme / endonuclease ; reverse transcriptase ;	2
3(c)	<i>any two from:</i> 1 small / low mass, so can enter, cells / <i>E. coli</i> (through membrane); 2 self-replicate in cell so multiply / make many copies of, gene ; 3 have restriction site(s) / can be cut by restriction enzymes, so new gene can, be added / join ; 4 have, marker / antibiotic resistance / fluorescence / reporter, <u>genes</u> , so , recombinants / transformed cells / cells that took up plasmid, can be recognised ; 5 have promoter so gene can be, expressed / transcribed ; 6 circular so , more stable / not damaged by host cell enzymes ;	2
3(d)	<i>any four from:</i> 1 prevents / less / lower, (named) disease / infection / pathogen transmission, risk ; 2 large / unlimited, supply OR mass production (from engineered bacteria) ; 3 cost of, purification / processing, lower ; 4 lower risk of, allergy / immune reaction / rejection / side effects ; 5 potential to, engineer / improve, recombinant proteins ;	4
3(e)(i)	fewer genes, expressed / have increased expression ;	1
3(e)(ii)	<i>any two from:</i> 1 transcription factors ; 2 (help / stop), binding / functioning, of RNA polymerase ; 3 ref. promoter ; 4 AVP ; light, is detected (by eyes) / causes changes melatonin enhancer / silencer, (DNA) sequences signalling, molecules / pathways	2
