October/November 2017

MARK SCHEME

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2017 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

 ${\rm \rlap{R}\hskip-1pt B}$ IGCSE is a registered trademark.

Question			Answer		Marks		
1	Analyse the limitations to ADP of using budgets and variance analysis when deciding the future of factory Q. Refer to Appendix 1 in your answer.						
	Level	K 3 marks	App 2 marks	An 5 marks			
	2	3 marks Understanding of budgets/variance analysis and limitation(s)	2 marks Two points applied to ADP	4–5 marks Good analysis of the limitations of budgets/variance analysis			
	1	1–2 marks Understanding of budgets/variance analysis	1mark One point applied to ADP	1–3 marks Some analysis of limitations			
	0	No creditable answe	r				
	 expansion/comment. This question is about limitations of use of budgets/variance NOT the benefits Knowledge Budget Variance analysis – comparison of budget with actual Limitations of budgets Focused on short term May be unrealistic 						
	Bias of setterMay not account for external changes						
	 Application From Appendix 1 Factory Q made a loss over last 3 months according to actual data – compared to a budgeted profit. \$2m loss rather than \$8m profit Adverse variance of \$10m Factory is making a positive contribution to head office overheads Allocated head office overheads were \$1m higher than budgeted From text 						
	Factor	•	erse profit variance for 5 – 12 years ago. Equip	-			

© UCLES 2017 Page 2 of 19

Question	Answer	Marks
1	 Analysis Were last 3 months typical? It would help to have data for longer period. Budgets of little value if the factory managers were not involved in setting them – were these just handed down from Head Office? Factory has no control over Head Office overhead allocation – and why has this increased? Overheads would have to be covered by other factories if it is closed Not enough data – how were head office costs allocated? How long would the factory overhead costs continue to be incurred after closure? Could supply be outsourced? Consideration of dangers of outsourcing Could the adverse variance be the result of failure to update factory to make it more efficient. Equipment is old. ARA: Any relevant consideration of factors that ADP should take into account that budgets ignore e.g. impact on reputation of ADP if factory closed and employees made redundant

Question	Answer	•			Marks		
2(a)	Refer to Table 1 and the information about Asif's plan on lines 14–25. Calculate the forecast 2018 profit for the washing machine factory.						
		2017	2018	Method			
	Units sold	2m	1.95m (1)	2 m less 2.5% using PED calculation -0.5 × 5 = -2.5% 2.5% of 2m = 0.05m 2m - 0.05m = 1.95m			
	Average selling price of washing machines to retailers	\$200 per unit	\$210 (1)	Price increase of 5% \$200 + 5% 200 × 1.05 = \$210			
	Unit cost of sales	Cost of sales \$200m	\$97 (1)	Unit cost was 200m/2m = \$100 \$100 less 3% = \$97			
	Unit contribution to overheads		\$113 (1)	\$210 – \$97			
	Contribution to ADP overhead costs	\$200m	\$220.35m (1)	113 × 1.95 m = \$220.35			
	Overheads of washing machine division	\$150m	\$135m (1)	\$150 less 10% 150 × 0.9 = \$135m			
	Allocation of head office overheads to washing machine division remain same	\$25m	\$25m (1)				
	2018 profit made by washing machine division	\$25m	\$60.35m (8)	\$220.35 - 135 - 25 =			
	OFR Total Revenue = 1.95 × 210 = \$409.5m (3) 420m ((2)	\$60.35m			

© UCLES 2017 Page 4 of 19

Question	Ansv	Answer			
	Cost of sales = 1.95m × 97 = 189.15m Gross profit = 220.35m Factory Overheads = 135 Overheads = 25 Total cost = 349.15m Profit = 60.35m If no rewardable calculation: Profit = TR – TC or Total contribution – F Likely answers: Where method shown at \$66m (7) \$68.5m (5) \$55.5m (7)	, ,

Question			Answ	er		Mark		
2(b)				atio analysis to Al er group. Refer to		1		
	Level	K 2 marks	App 2 marks	An 3 marks	Eval 3 marks			
	2	2 marks Two relevant points about accounting ratio(s) or ratio and stakeholder	2 marks Two points applied	3 marks Good use of theory or reasoned argument on uses/limitations of ratios	3 marks Good evaluation of the usefulness of accounting ratios			
	1	1 mark One relevant point	1 mark One point applied	1–2 marks Some use of theory or reasoned argument	1–2 marks Some evaluation of usefulness of ratios			
	No creditable answer							
	considered Candidate groups.	d then limit to L1 s may be reward	AN and EVAL	ne other stakeholde				
	 Knowledge Stakeholder has interest in business activity. Include external and internal stakeholders Accounting ratios analyse business profitability, liquidity, efficiency, 							
	gearing and shareholder measures • Understanding of the selected accounting ratios in Table 2 - Gearing ratio. Measure of reliance on debt v equity finance - ROCE. Profit generated by capital invested in business - Current ratio. Liquidity – ability to pay short term debt - Dividend yield; return to shareholders of their investment							
	Application Statement that profit margin is low/high is not application. Requires justification. • Low gearing							
	Curre ADP v consider	nt ratio; low but a wishes to raise sl	nort term profit by manageme	ability (implies 7.8% nt/shareholders). A				

© UCLES 2017 Page 6 of 19

Question	Answer	Marks
2(b)	 Analysis Low gearing suggests that banks could view further lending to ADP as being low risk. This supported by adequate liquidity and profitability. Banks would need to see this accounting data to make decisions about further finance. Management use the accounting ratios as a measure of performance and can set targets accordingly. This helps managers to monitor progress and make decisions to improve the performance of the business. Sufficient finance may be available to update Factory Q and therefore deal with its adverse profit variance. Business appears liquid with low gearing – scope to use finance to invest in latest equipment and/or lean production? Shareholders will use accounting ratios to judge performance of the business and make decisions about whether to support directors at AGM. Shareholders will make judgements about whether it is worth maintain their investment in ADP. I dividend yield is insufficient they may consider selling shares but this will also depend on performance of share price. Will need to consider ratios such as PE Ratio. Adequate liquidity – suggest able to meet all short term obligations so suppliers should be willing to supply on credit (current ratio) Low gearing – Asif could take more risks with growth/product development and not cut dividends? 	
	 Evaluation Need for data over time to identify trends and for inter firm comparison Has there been any window dressing? Management accounts e.g. for each division much more useful to allow divisions/factories to be compared Trend analysis essential – gearing might have been much higher and current ratio lower last year Acid test ratio important too. Current ratio insufficient to judge liquidity ARA: Other stakeholders e.g. end consumers may have little interest in ratios although customers

Question			Answer			Marks			
3	'Long term sales forecasts will be the most important component in our new marketing plan to break into the USA market' (lines 58–59). Do you agree with this statement? Justify your answer.					16			
	Level	K 2 marks	App 2 marks	An 6 marks	Eval 6 marks				
	2	2 marks Two or more relevant points about sales forecasting /market planning	2 marks Two points applied	4–6 marks Good use of theory or reasoned argument to analyse market planning content	4–6 marks Good evaluation of importance of components of marketing plan				
	1	1 mark One relevant point about either sales forecasting or market planning	1 mark One point applied	1–3 marks Some use of theory or reasoned argument to analyse market planning content	1–3 marks Some evaluation of contents of marketing plan				
	0								
	Examiner note: If no knowledge of sales forecasting demonstrated limit to L1 AN and EVAL Focus is on process of marketing plan not the other factors that will also be important. Knowledge Sales forecasts – predictions of future sales levels/revenue Marketing plan – detailed report on a business's marketing strategy – situational analysis, market research, chiesting budget mix								
	 Sales 	market plan							
	ADP I will re US m	nas no experienc peat itself. arket will need bi act safety may ne	gger washing ma	ichines etc.					

© UCLES 2017 Page 8 of 19

Question	Answer	Marks
3	 Analysis Marketing plan will help ADP understand its current strengths, existing and potential competitors, consumer tastes and trends, the state of the market that is being entered. This will then inform decisions about the marketing mix that need to be taken in order to achieve the marketing objectives. Sales forecasts will inform decisions about appropriate objectives and thus determine budget required to achieve. Situational analysis will be important starting point for the business that will then enable sales forecasts to be made. Other elements of marketing plan are important e.g. integrated marketing mix to ensure consistency in message communicated to potential customers and therefore attract sales. Evaluation Market plan must be based on sales forecasts – how else can realistic objective be set? How else could appropriate budget be determined? How could mix decisions be made unless some idea of likely effective 	
	 demand is established? Sales forecasts can be very inaccurate – especially long term forecasts and especially for new markets and for fast changing markets or those with unusual customer demands e.g. larger appliances in the USA! Other components of the plan also very important: SMART objective; realistic budget (how determined?) and a fully integrated marketing mix. Especially important in this case as in this case, the forecasts will have to be based on market research and/or qualitative methods – moving average not appropriate.

© UCLES 2017 Page 11 of 19

Question	Answer	Marks
4(b)	 Analysis Worsening performance measures need to be benchmarked against other ADP factories and close competitors to give a more meaningful picture. Increase pay to average ADP levels to provide for more of their 'lower order needs' and to satisfy 'hygiene needs' BUT this would raise unit labour costs substantially within country Z factories Improve working conditions to avoid accidents, for example. This would help to meet 'security' needs and hygiene needs. Could also provide job security/employment contracts etc. Adopt a more consensual/democratic leadership style which allows workers the opportunity to gain job enrichment – these measures might not have to be introduced with an increase in pay because pay may not be a motivator in this country if employees already receive higher pay that equivalent workers. 	
	 Improving working conditions may not be effective in improving motivation in the long term unless efforts are made to address the 'motivation' factors and these improvements could also add to unit labour costs Increasing pay would increase costs unless there was a huge improvement in productivity and pay is not the only factor in determining this. How likely is ADP to adopt a 'soft' approach to employees when the company seems determined to take advantage of its 'multinational corporation status'? Already paid more than similar workers and this doesn't appear to have generated high levels of performance 	

© UCLES 2017 Page 12 of 19

Question			Aı	nswer		Marks	
5	Evaluate whether the introduction of the lean production techniques will be enough to improve ADP's operational efficiency.						
	Level	K 2 marks	App 2 marks	An 6 marks	E 6 marks		
	2	2 marks Two points about lean production and operational efficiency	2 marks At least two techniques applied to ADP	4–6 marks Good use of theory or reasoned argument to explain how lean production techniques can improve operational efficiency	4–6 marks Good evaluation of likely effectiveness of techniques and consideration of importance of other factors		
	1	1 marks One point about lean production or operational efficiency	1 marks Some application to ADP	1–3 marks Some use of theory or reasoned argument to explain how LP techniques can improve Ops efficiency	1–3 marks Some evaluation e.g. either of techniques or other factors that might influence Ops efficiency		
	0 No creditable answer						
	 Knowledge Lean production – using resources more efficiently so less are used; less wastage; less time. Techniques include: JIT; Kaizen; TQM; simultaneous engineering; quality circles; zero defects; ERP may be used to aid JIT Operational efficiency: Productivity, inputs into outputs, costs Application ADD has high inventories partly due to peer communication between Opsite and Communica						
	 ADP has high inventories partly due to poor communication between Ops and Marketing. ADP has little employee involvement Investment in employees is not a priority Wastage at Factory Q has increased etc. Poor relationship with suppliers 						

© UCLES 2017 Page 13 of 19

Question	Answer	
5	 Analysis JIT would cut inventories by focussing the business on material etc. arriving at the time they are required Reduce number of suppliers and/or develop a better long term relationship that offers support to suppliers so that needs of ADP more effectively met. This may involve including suppliers at early stage in development of new products Employee involvement could help this business improve labour performance/motivation and provide 'shop floor' ideas for improving efficiency – evidence from case that both are required. Evaluation Lean production works most effectively with efficient and flexible machines and employees e.g. to switch from one product to another. There is evidence that these features do not exist in ADP (e.g. Factory X) so lean production techniques cannot be easily employed within ADP unless there is also investment in equipment and training – investment in equipment possible with low gearing but investment in employees seems not to be an ADP priority JIT requires better communication to forecast demand and plan output levels AND needs well motivated suppliers SO lean production will not be effective until these are sorted. Kaizen will need a complete change in leadership style and approach to employees and until these occur ADP will not introduce Kaizen effectively so lean production is insufficient.

Question	Answer	Marks
6	Evaluate whether Prahalad and Hamel's concept of core competencies and Porter's Five Forces model are likely to be effective frameworks for ADP's future business strategies. Refer to Appendix 2 in your answer.	20
	 Note to examiner: Do not credit reproduction of phrases/data in the case study without expansion/comment. Limit to L1 AN and EVAL if only consider P&H or Porter Evaluation should focus on the usefulness of the model(s) to ADP strategy decisions. However, L1 evaluation may be awarded for general discussion of how information in App 1 will help ADP make a decision Knowledge Core competence: The main strengths or strategic advantages of a business. Core competencies are the collective knowledge and technical abilities that allow a business to be competitive in the marketplace. Porter's five forces analysis is a framework that attempts to analyse the level of competition within an industry when planning strategic developments Porter's five forces analysis includes: buyer power, supplier power, threat of substitutes again of automatic properties are power of automatic properties. 	
	 Application Development of points made in Appendix 2 ADP: Maker of very reliable electric motors which are used in own appliances and by other manufacturers; 'mini-battery' technology has been patented. Rivals seem to having problems developing low water/energy use washing machines. However, barriers to entry might be lower in this washing machine product segment. ADP has experience of operating multi-nationally and selling in many markets. Appendix 2 suggests that there is less competitive rivalry in the Option B strategy and that this is ADPs unique core competency 	
	 Analysis Patents make it difficult for rivals to copy mini-battery technology therefore provides ADP a distinctive core competency and increases competitiveness in the market Understanding core competencies will enable ADP to focus on strategies that ADP will have a competitive advantage in and therefore are likely to be more successful BUT are these sufficient to allow the proposed product development? Do these competencies offer sufficient benefit to customers of the proposed products? Scope for discussion based on weaknesses in core areas e.g. lack of mobile phone experience and ADP tends to operate in lower prices segments of markets. By using Porter ADP can assess the threat of substitutes etc. to decide whether Option A or B is better. This will reduce the risk of entering the wrong market 	

© UCLES 2017 Page 16 of 19

Question	Answer	Marks
6	 Drawbacks to both models: e.g. Porter – really used for whole industry analysis rather than specific market segments; Core competence – not always easy to identify a core competence and it can change with time and if for example certain people leave an organisation. Other strategic analysis tools and frameworks for future business strategies e.g. PESTLE and SWOT Supplier power might be a real problem with both projects BUT ADP might be able to develop its own washing machine pump therefore the model is useful in guiding ADP's decision making Option B as an example of a future strategy demonstrates a more distinctive/unique core competence as ADP's competitors have less advanced batteries therefore the model is useful in guiding ADP to most appropriate strategy 	

© UCLES 2017 Page 17 of 19

Question	Answer	Marks
7	Discuss how ADP should strategically manage and plan for crises in ways that minimise their long term impact on the business.	20
	 Knowledge: Crisis management – the process by which an organisation deals with a major event that threatens to harm the organisation, its stakeholders, or the general public. Definition of contingency planning Identification of appropriate responses to crises Act quickly Investigate causes of crisis Recall products Stop production of faulty products Public relations activities 	
	 Application Reference to accidents at Factory Q as example of potential crisis What evidence is there of prior planning or even a sense of urgency over the current safety issue e.g. delay in discussion at Board meeting Issue of compensation for customers Issue of whether ADP response is ethical – insisting that customers sign letters Asif's assertion that admitting responsibility would be expensive mistake Stop selling the hairdryers 	
	 Analysis Is this a crisis? Not yet – but it has the potential to become one. Risk to consumers: personal injury. Risk to business: ADP could come under intense media scrutiny if the news 'gets out' which could result in loss of goodwill, brand image, customer relations and sales. Keep quiet and pay compensation: might only be a problem with a small batch of hairdryers so to recall them all would be unnecessarily damaging. Find out quickly how many units are likely to be affected – then decide on further action. This might prevent loss of quality brand image if all units of the hairdryer are recalled unnecessarily. Admit responsibility and recall all units, offering full compensation. This cuts the long term risk of 'covering up' the problem (legal action and lost sales/reputation) but there will be short term consequences as quality image will be hit, in short term. Employees might be more motivated working for an organisation that is seen to be operating responsibly. Importance of strategically managing and planning for similar contingencies will help to reduce the potential negative impact of them e.g. preparing employees and resources and training of PR employees for media communications. 	

© UCLES 2017 Page 18 of 19

Question	Answer	Marks
7	 ADP senior management not very stakeholder responsible e.g. workers in country Z and suppliers not happy so this is likely to influence the decision made. Contingency planning and crisis management have costs associated with them – need to be compared with potential cost of not strategically managing/planning for negative events Contrasting short term versus long term impact Would help to know cost of recall 	

© UCLES 2017 Page 19 of 19
