	CHEMISTRY Advanced Practical Skill	S			9701/31 May/June 2011 2 hours
6048604	Candidates answer on the Question Paper. Additional Materials: As listed in the Instructions to Supervisors				
*	READ THESE INSTRUCTIONS FIRST Write your Centre number, candidate number and name on all the work you hand in. Give details of the practical session and laboratory where appropriate, in the boxes provided. Write in dark blue or black pen. You may use a soft pencil for any diagrams, graphs or rough working. Do not use staples, paper clips, highlighters, glue or correction fluid. DO NOT WRITE IN ANY BARCODES.				
Answer all questions. You may lose marks if you do not show your working or if you do not use appropriate units. Use of a Data Booklet is unnecessary.			nits.		
Qualitative Analysis Notes are printed on pages 10 and 11.		Session			
		nation, fasten all your wo given in brackets [] at t		n or	Laboratory

This document consists of 11 printed pages and 1 blank page.

9701/31/M/J/11

- 1 **FA 1** is sulfuric acid, H_2SO_4 , of approximate concentration 0.7 mol dm⁻³. **FA 2** is $0.150 \text{ mol dm}^{-3}$ sodium hydroxide. You are also provided with phenolphthalein (indicator).
 - You will determine the exact concentration of **FA 1** by titration.

$$H_2SO_4(aq) + 2NaOH(aq) \rightarrow Na_2SO_4(aq) + 2H_2O(I)$$

(a) Method

Dilution

- Pipette 25.0 cm³ of FA 1 into the 250 cm³ graduated (volumetric) flask labelled FA 3.
- Make the solution up to the mark using distilled water.
- Shake the flask to mix the solution of FA 3.

Titration

- Rinse out the pipette with distilled water and then with FA 3.
- Pipette 25.0 cm³ of **FA 3** into a conical flask. •
- Add 5 drops of phenolphthalein indicator to the flask. The indicator should remain colourless.
- Fill the burette with FA 2.
- Titrate FA 3 with FA 2, until a permanent pale pink colour is obtained.

You should perform a rough titration.

In the space below record your burette readings for this rough titration.

Carry out as many accurate titrations as you think necessary to obtain consistent results.

- Record in a suitable form below all of your burette readings and the volume of FA 2 added in each accurate titration.
- Make sure that your recorded results show the precision of your practical work.

For

Examiner's Use

[7]

(b) From your accurate titration results, obtain a suitable value to be used in your calculations. Show clearly how you have obtained this value.

(c) Calculations

Show your working and appropriate significant figures in the final answer to **each** step of your calculations.

(i) Calculate how many moles of NaOH were present in the volume of FA 2 calculated in (b).

..... mol of NaOH

(ii) Calculate how many moles of H_2SO_4 were present in 25.0 cm³ of FA 3.

$$H_2SO_4(aq) + 2NaOH(aq) \rightarrow Na_2SO_4(aq) + 2H_2O(l)$$

Ι	
II	
III	
IV	

For Examiner's Use

..... mol of H₂SO₄

(iii) Calculate how many moles of H_2SO_4 were present in 25.0 cm³ of the undiluted solution FA 1.

(iv) Calculate the concentration, in mol dm⁻³, of H_2SO_4 in **FA 1**.

The concentration of H_2SO_4 in **FA 1** was moldm⁻³. [4]

[Total: 12]

- 2 You will determine, using Hess' Law, the enthalpy change, ΔH_1 , for the reaction of magnesium with oxygen to form magnesium oxide.
 - $Mg(s) + \frac{1}{2}O_2(g) \rightarrow MgO(s)$
 - (a) Reaction of magnesium with sulfuric acid

Method

FA 4 is 0.64 mol dm^{-3} sulfuric acid. **FA 5** is magnesium turnings. This is supplied in two containers.

You will carry out the experiment twice.

- Support the plastic cup in a 250 cm³ beaker.
- Using a measuring cylinder, transfer 25 cm³ of **FA 4** into the plastic cup.
- Tilt the beaker so that the bulb of the thermometer is covered by the solution. Measure and record the initial temperature of the solution.
- Carefully, add all the FA 5 from one of the containers into the plastic cup.
- Stir the mixture constantly with the thermometer.
- Record the highest temperature obtained.
- Empty and rinse the plastic cup and dry it with a paper towel.
- Repeat the experiment using the second portion of **FA 5**.

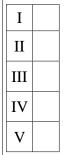

In the space below, record all your readings in an appropriate form. Calculate the mean temperature rise.

mean temperature rise =°C [5]

Calculation

Show your working and express your answers to three significant figures.

(i) Using the mean temperature rise above, calculate the mean heat energy produced in the reaction.
(You may assume that 4.3 J are required to raise the temperature of 1.0 cm³ of any solution by 1.0 °C.)

For

Examiner's Use (ii) Calculate the enthalpy change, ΔH_2 , in kJ mol⁻¹, for the following reaction.

 $Mg(s) + H_2SO_4(aq) \rightarrow MgSO_4(aq) + H_2(g)$

You should assume that the magnesium in your reaction is in excess.

 $\Delta H_2 = \dots kJ \text{ mol}^{-1} [2]$ sign value

For Examiner's Use

(b) Reaction of magnesium oxide with sulfuric acid

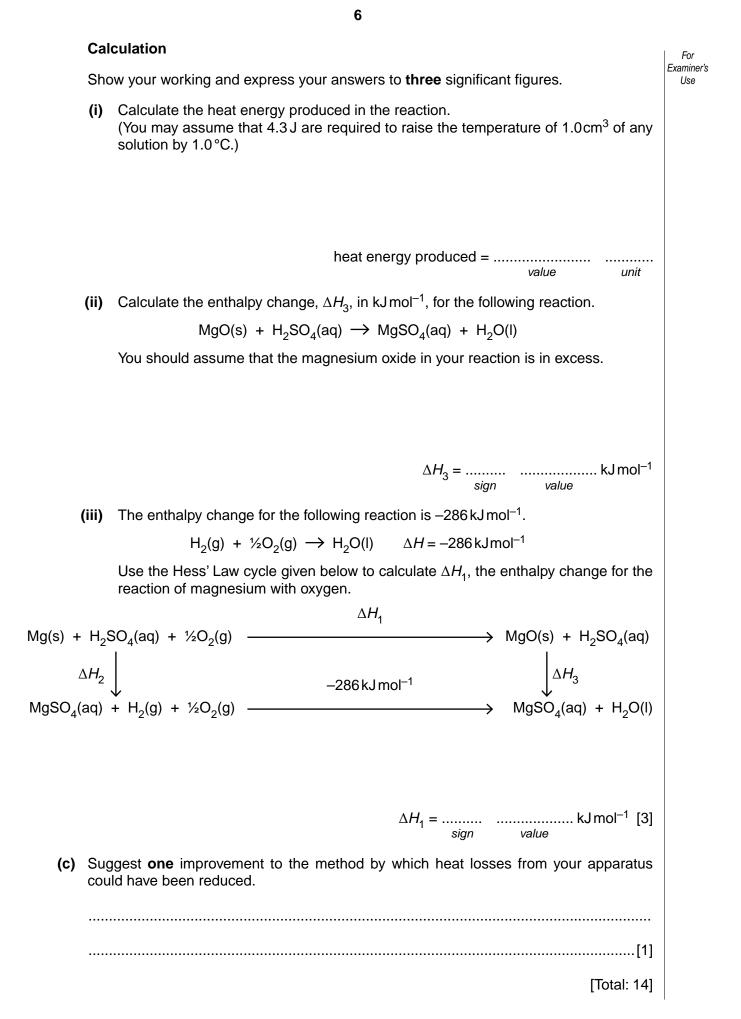

Method

FA 4 is 0.64 mol dm^{-3} sulfuric acid. **FA 6** is magnesium oxide.

- Using a measuring cylinder, transfer 50 cm³ of **FA 4** into a 250 cm³ beaker.
- Place the beaker on a tripod and gauze, and heat gently until the temperature of the acid reaches 45 °C–60 °C.
- Support a plastic cup in a 250 cm³ beaker.
- Transfer all the solution of hot **FA 4** into the plastic cup.
- Stir and record the temperature of hot FA 4.
- Immediately add all the FA 6 to the FA 4 in the plastic cup.
- Stir the mixture constantly with the thermometer.
- Record the highest temperature obtained.

In the space below, record all your readings in an appropriate form.

[3]

3 Qualitative Analysis

At each stage of any test you are to record details of the following.

- colour changes seen
- the formation of any precipitate
- the solubility of such precipitates in an excess of the reagent added

When gases are released they should be identified by a test, **described in the appropriate place in your observations.**

You should indicate clearly at what stage in a test a change occurs. Marks are **not** given for chemical equations. **No additional tests for ions should be attempted.**

If any solution is warmed, a boiling tube MUST be used.

Rinse and re-use test-tubes and boiling tubes where possible.

Where reagents are selected for use in a test, the full name or correct formula of the reagents must be given.

(a) FA 7 contains one cation and one anion from those listed in the Qualitative Analysis Notes on pages 10 and 11.

Put two spatula measures of **FA 7** into a test-tube. Add about two-thirds of a test-tube of distilled water and dissolve the solid. For each test that you carry out, use 1 cm depth of the solution of **FA 7**.

(i) Carry out the following tests and complete the table below.

test	observation(s)
Add 5 drops of aqueous barium chloride (or barium nitrate) to your solution of FA 7 .	
Add 5 drops of aqueous silver nitrate to your solution of FA 7 .	

For Examiner's Use (ii) Put a very small spatula measure of solid FA 7 into a hard glass test-tube.

(11)	Hold the test-tube horizontally and heat it gently for a few seconds, then heat it strongly until no further change takes place. Leave the test-tube to cool to room temperature. <i>While cooling takes place, move on to (iv).</i> In the space below record the observations made at each stage in an appropriate form.	For Examiner's Use
(iii)	State what deductions you can make about the identity of the anion in FA 7 from the tests above.	
(iv)	Use the information in the Qualitative Analysis Notes on pages 10 and 11 to select a further test to confirm the identity of the anion in FA 7 . test Carry out this test and, in the space below, record the observation(s) made in an appropriate form. State your conclusion.	IV V VI VII VIII IX
(v)	The cation in FA 7 is aluminium ion, calcium ion or zinc ion. Select one reagent to identify the cation in FA 7 . reagent Use this reagent to carry out a test. Record the observation(s) made and identify the cation.

.....

.....[9]

(b) FA 8 contains one cation from those listed on page 10 and 11.

Put all of the **FA 8** into a test-tube. Half fill the test-tube with distilled water and dissolve the solid.

(i) To 1 cm depth of the solution of **FA 8** in a test-tube, add aqueous potassium iodide until the test-tube is half full. Allow the mixture to stand for two minutes.

Use a dropping pipette to transfer about 1 cm³ of the mixture from the top of the test-tube to another test-tube. Add 5 drops of starch solution. Record all of your observations.

(ii) State what **type** of chemical behaviour has been shown by potassium iodide in this reaction. Give an ionic equation to justify your answer.

(iii) To another 1 cm depth of solution of FA 8 in a test-tube, add aqueous sodium hydroxide. Record the observation(s) made. Give the **ionic** equation for the reaction taking place.[5] [Total: 14]

Qualitative Analysis Notes

Key: [ppt. = precipitate]

1 Reactions of aqueous cations

	reaction with			
ion	NaOH(aq)	NH ₃ (aq)		
aluminium, A <i>l</i> ³⁺ (aq)	white ppt. soluble in excess	white ppt. insoluble in excess		
ammonium, NH ₄ +(aq)	no ppt. ammonia produced on heating	_		
barium, Ba ²⁺ (aq)	no ppt. (if reagents are pure)	no ppt.		
calcium, Ca ²⁺ (aq)	white ppt. with high [Ca ²⁺ (aq)]	no ppt.		
chromium(III), Cr ³⁺ (aq)	grey-green ppt. soluble in excess giving dark green solution	grey-green ppt. insoluble in excess		
copper(II), Cu ²⁺ (aq)	pale blue ppt. insoluble in excess	blue ppt. soluble in excess giving dark blue solution		
iron(II), Fe ²⁺ (aq)	green ppt. turning brown on contact with air insoluble in excess	green ppt. turning brown on contact with air insoluble in excess		
iron(III), Fe ³⁺ (aq)	red-brown ppt. insoluble in excess	red-brown ppt. insoluble in excess		
lead(II), Pb ²⁺ (aq)	white ppt. soluble in excess	white ppt. insoluble in excess		
magnesium, Mg ²⁺ (aq)	white ppt. insoluble in excess	white ppt. insoluble in excess		
manganese(II), Mn ²⁺ (aq)	off-white ppt. rapidly turning brown on contact with air insoluble in excess	off-white ppt. rapidly turning brown on contact with air insoluble in excess		
zinc, Zn ²⁺ (aq)	white ppt. soluble in excess	white ppt. soluble in excess		

[Lead(II) ions can be distinguished from aluminium ions by the insolubility of lead(II) chloride.]

2 Reactions of anions

ion	reaction
carbonate, CO ₃ ²⁻	CO ₂ liberated by dilute acids
chromate(VI), CrO ₄ ²⁻ (aq)	yellow solution turns orange with H ⁺ (aq); gives yellow ppt. with Ba ²⁺ (aq); gives bright yellow ppt. with Pb ²⁺ (aq)
chloride, C <i>l</i> ⁻ (aq)	gives white ppt. with Ag ⁺ (aq) (soluble in NH ₃ (aq)); gives white ppt. with Pb ²⁺ (aq)
bromide, Br [–] (aq)	gives cream ppt. with Ag ⁺ (aq) (partially soluble in $NH_3(aq)$); gives white ppt. with Pb ²⁺ (aq)
iodide, I [–] (aq)	gives yellow ppt. with Ag ⁺ (aq) (insoluble in NH ₃ (aq)); gives yellow ppt. with Pb ²⁺ (aq)
nitrate, NO ₃ ⁻ (aq)	NH_3 liberated on heating with OH ⁻ (aq) and A <i>l</i> foil
nitrite, NO ₂ ⁻ (aq)	NH ₃ liberated on heating with OH ⁻ (aq) and A <i>l</i> foil; NO liberated by dilute acids (colourless NO \rightarrow (pale) brown NO ₂ in air)
sulfate, SO ₄ ²⁻ (aq)	gives white ppt. with Ba ²⁺ (aq) or with Pb ²⁺ (aq) (insoluble in excess dilute strong acids)
sulfite, SO ₃ ²⁻ (aq)	SO ₂ liberated with dilute acids; gives white ppt. with Ba ²⁺ (aq) (soluble in excess dilute strong acids)

3 Tests for gases

gas	test and test result	
ammonia, NH ₃	turns damp red litmus paper blue	
carbon dioxide, CO ₂	gives a white ppt. with limewater (ppt. dissolves with excess CO ₂)	
chlorine, Cl ₂	bleaches damp litmus paper	
hydrogen, H ₂	"pops" with a lighted splint	
oxygen, O ₂	relights a glowing splint	
sulfur dioxide, SO ₂	turns acidified aqueous potassium dichromate(VI) from orange to green
