Cambridge International Advanced Subsidiary and Advanced Level

COMPUTER SCIENCE 9608/23

Paper 2 Written Paper

October/November 2016

MARK SCHEME
Maximum Mark: 75

#### **Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

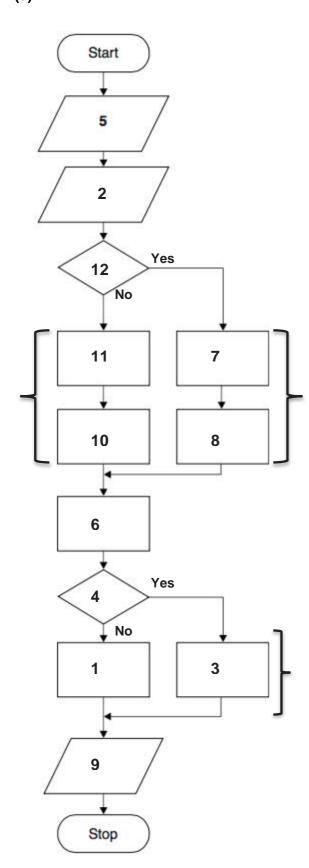

Cambridge is publishing the mark schemes for the October/November 2016 series for most Cambridge IGCSE<sup>®</sup>, Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is the registered trademark of Cambridge International Examinations.

	Cambridge International AS/A Level – October/November 2016	9608	23

# 1 (a)

Note: Order of 11, 10 and 7,8 may be reversed.

Page 3	Mark Scheme	Syllabus	Paper
	Cambridge International AS/A Level – October/November 2016	9608	23

One mark for each of the following symbols / symbol combinations:

- 2
- 7 and 8 from YES
- 10 and 11
- 6
- 1 and 3 (1 from NO, 3 from YES)
- 9
- 12 and 4 Max [6]

# (b) Rows 2 to 7 are examples only

TicketType	BaggageWeight	Explanation	Expected output
E	15	Under the allowance	0
E	> 16	Under the allowance	Charge
S	<= 20	Under the allowance	0
S	> 20	Under the allowance	Charge
E	16	Boundary weight for a type E ticket	0
S	20	Boundary weight for a type S ticket	0
E or S	negative or non- numeric	Invalid weight	Error message

Ticket type	Baggage allowance (kg)	Charge rate per additional kg (\$)
E,	16	3.50
'S'	20	5.75

One mark for each different test (examples above)

Max [5]

	Cambridge International AS/A Level – October/November 2016	9608	23

(c) INPUT TicketType

WHILE NOT (TicketType = 'E') OR (TicketType = 'S')
 INPUT TicketType
ENDWHILE

### One mark for each of:

- WHILE ... ENDWHILE
- Correct condition in a loop
- INPUT within loop plus one before loop // alternative arrangement leading to correct exit from loop [3]

2 (a)

		Cambridge International AS/A Level – October/November 2016	9608	23
	(b) O	ne mark for each of: Assignment: 01 // 02 // 06 // 09 // 14 // 18 Selection: 07 // 11 Iteration: 03 // 05		[3]
3	(a) (i			[1]
	(ii)	103		[1]
	(iii)	) 'K'		[1]
	(iv	"come"		[1]
	(b) (i	PROCEDURE CalculateCustomerID  OUTPUT "Key in surname"  INPUT Surname  Length ← CHARACTERCOUNT(Surname)  CustomerID ← 0  FOR i ← 1 TO Length  //NextChar is a single character from Surna  NextChar ← 1 SUBSTR(Surname, i, 1) // ONECE  NextCodeNumer ← ASC(NextChar)  CustomerID ← CustomerID + NextCodeNumber  ENDFOR		e, i)
		OUTPUT "Customer ID is ", CustomerID		

ENDPROCEDURE

[3]

Page 6	Mark Scheme	Syllabus	Paper
	Cambridge International AS/A Level – October/November 2016	9608	23

(ii) 'Pseudocode' solution included here for development and clarification of mark scheme. Programming language example solutions appear in the Appendix.

```
PROCEDURE CalculateCustomerID
   DECLARE Surname : STRING
   DECLARE NextChar : CHAR
   DECLARE NextCodeNumber, i, CustomerID, SLength: INTEGER
   OUTPUT "Key in surname"
   INPUT Surname
   SLength ← LEN(Surname)
   CustomerID \leftarrow 0
   FOR i \leftarrow 1 TO SLength
      //NextChar is a single character from Surname
      Nextchar ← MID(Surname, i, 1)
      NextCodeNumber ← ASC(NextChar)
      CustomerID ← CustomerID + NextCodeNumber
   ENDFOR
   OUTPUT "Customer ID is ", CustomerID
ENDPROCEDURE
```

#### Mark as follows:

- Declaration of Surname as STRING and NextChar as CHAR and any three INTEGERs
- Prompt and Input
- Calculation of string length
- FOR Loop to process all characters in the string
- Assignment to NextChar in a loop
- Assignment to NextCodeNumber in a loop
- Totalling CustomerID in a loop
- Output <u>following a loop</u>

[6]

# (c) (i) Visual Basic

Function CalculateCustomerID(ByVal AnyName AS STRING) As Integer

#### Pascal

FUNCTION CalculateCustomerID(AnyName : STRING) : INTEGER

#### **Pvthon**

def CalculateCustomerID(AnyName):

#### Mark as follows:

- Correct keyword + Function name
- Single input parameter of correct type
- Return parameter type

[3]

#### (ii) Visual Basic

Return customerID // CalculateCustomerID = CustomerID

#### Pascal

Result := CustomerID // CalculateCustomerID := CustomerID

Python
Return CustomerID [1]

Page 7		Mark Scheme	Syllabus	Paper
		Cambridge International AS/A Level – October/November 2016	9608	23
(i	iii)	<pre>Visual Basic ThisID = CalculateCustomerID ("Wilkes")</pre>		
		<pre>Pascal ThisID := CalculateCustomerID ('Wilkes')</pre>		
		<pre>Python     ThisID = CalculateCustomerID ("Wilkes")</pre>		
		One mark per underlined element		[3
(d)	(i)	<ul> <li>Built-in functions are made available by the programming languagesystem</li> <li>Built-in functions are ready made and tested</li> <li>User-defined functions can be modified // built-in cannot be modified functions can be designed to meet the user's required.</li> </ul>	odified	dy in the
		<ul> <li>User-defined functions can only be used in that program / mod</li> </ul>		[Max 2
	(ii)	<ul> <li>They have an identifier name</li> <li>They return a value</li> <li>They have none, one or more arguments</li> <li>Both perform a specific task</li> </ul>		
		<ul><li>Both represent re-usable code</li><li>Both are 'called'</li></ul>		[Max 2

(b)	(i)	<ul> <li>Errors in keywords are highlighted // before the compilation pro</li> <li>Provides line-by-line syntax checking as code is typed in</li> <li>Provides line number of the error</li> <li>Display of known identifier names</li> <li>Auto-complete</li> <li>Colour-coding</li> </ul>	ocess	

- Auto-indent
- type checking
- Subroutine parameter checking

[Max 1]

- (ii) Set break-points
  - Single step / step into/over subroutine
  - Window to watch the changing value of variables

[Max 1]

Page 8	Mark Scheme	Syllabus	Paper
	Cambridge International AS/A Level – October/November 2016	9608	23

```
(c) (i) OPEN "PRODUCTS" FOR READ
    i ← 1
    WHILE NOT EOF("PRODUCTS")

    READFILE ("PRODUCTS", PCode[i])
    READFILE ("PRODUCTS", PDescription[i])
    READFILE ("PRODUCTS", Temp // PRetailPrice[i])

    PRetailPrice[i] ← TONUM(Temp)

    i ← i + 1
    ENDWHILE

CLOSE "PRODUCTS"
    OUTPUT "Product file contents written to arrays"
```

## (ii) Benefit:

- The number of file read operations is reduced (by 2/3rds)
- It may use less storage / space in the file if strings are NOT fixed length

One mark per bold phrase (three READFILE() counts as a single mark)

 All the data related to a single product is read at once / in one file operation / grouped together

#### Drawback:

- The program will need to use the string handling functions to isolate each of the three items of data
- Difficult to isolate data items if the format is not consistent
- More difficult to search

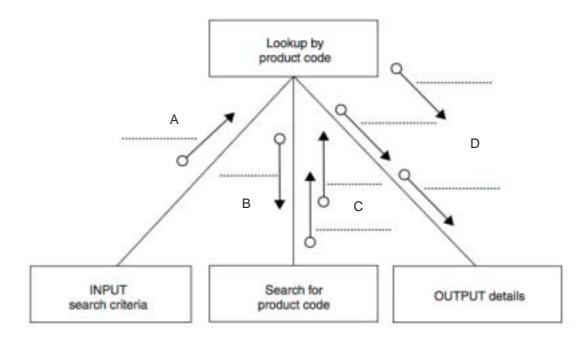

Max one benefit and one drawback

[2]

[5]

Page 9	Mark Scheme	Syllabus	Paper
	Cambridge International AS/A Level – October/November 2016	9608	23

(d)

One mark per group (one or more names) as follows:

- A: SearchCode
- B: SearchCode // ThisIndex
- C: ThisRetailPrice, ThisDescription
- D: SearchCode, ThisDescription, ThisRetailPrice

[4]

Page 10	Mark Scheme	Syllabus	Paper
	Cambridge International AS/A Level – October/November 2016	9608	23

**(e)** 'Pseudocode' solution included here for development and clarification of mark scheme. Programming language example solutions appear in the Appendix.

#### ENDFUNCTION

#### Mark as follows:

- Function header returns INTEGER
- Initialisation of index variable
- Loop through array PCode (including exit when found)
- Comparison of AnyName with PCode[i] in a loop
- Increment index variable in a loop

5	(i)	13 / 13.0	[1]
	(ii)	18.6	[1]
	(iii)	TRUE	[1]

Return index if AnyName found AND return -1 if AnyName not found

(iv) 32 [1]

[Max 6]

(v) 22 [1]
