Paper 4 Written Paper MARK SCHEME Maximum Mark: 75

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2018 series for most Cambridge IGCSE[™], Cambridge International A and AS Level components and some Cambridge O Level components.

[Turn over

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

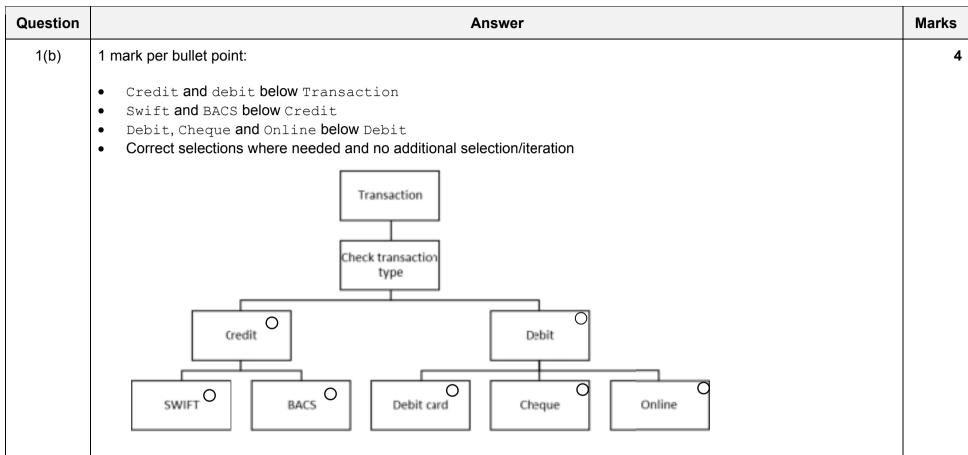

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
1(a)	1 mark per bullet point:	6
	 OpenAccount, AccountLifetime and CloseAccount below Bank Account Transactions below AccountLifetime with iteration Reopen Account? below Close Account FlagToReopen and DeletePermanently below ReopenAccount? with selection on both Example: Bank Account CloseAccount OpenAccount CloseAccount	

Question	Answer	Marks
2(a)	1 mark for each fact:	2
	<pre>18 type(waterdog, gundog). 19 is_a(standardpoodle, waterdog).</pre>	
2(b)	1 mark for each result:	2
	H = english_setter, irish_setter	

Question	Answer	Marks
2(c)	1 mark per bullet point to max 2:	2
	 is_a (irish_setter, W) is_a(irish_setter, W) 	
2(d)	1 mark per bullet point to max 3:	3
	 is_a(X,Z) AND fav_bird(Z, Y). 	
	fav_bird(X, Y) IF is_a(X, Z) AND fav_bird(Z, Y).	
2(e)	NO	1

Question	Answer	Marks
3(a)	1 mark for each completed statement:	7
	01 FOR Outer \leftarrow LENGTH(List)-1 TO 0 STEP -1 02 FOR Inner \leftarrow 0 TO (Outer - 1)	
	03 IF List[Inner] > List[Inner + 1] 04 THEN	
	05 Temp ← List[Inner]	
	06 List[Inner]	
	07 List[Inner + 1] ← Temp 08 ENDIF 09 ENDFOR 10 ENDFOR	
3(b)(i)	Ascending (must match answer to 3(a)	1

Question	Answer	Marks
3(b)(ii)	Line 03 Change the operator in the IF statement to < or <= rather than >	1
3(c)	<pre>1 mark per bullet Use of a (Boolean) flagRemainder of bubble correct Set flag when a swap has been madeLoop until a swap has not been made and then exit all loops Outer ← LENGTH(List)-1 REPEAT Inner ← 0 Swap ← FALSE REPPEAT IF List[Inner] > List[Inner + 1] THEN Temp ← List[Inner] List[Inner] ← List[Inner + 1] Swap = TRUE ENDIF Inner ← Inner + 1</pre>	4
	UNTIL Inner = Outer - 1 Outer ← Outer - 1 UNTIL Swap = FALSE OR Outer = 0	

Question		Answer	Mark
4(a)	• Aerial has attribute Role/Type with	<pre>formerInfo()/DisplayInfo() or equivalent.</pre>	
	Performer	Acrobat	
	FirstName: STRING LastName: STRING SecondaryRole: STRING StageName: STRING Type: STRING	UseFire: Boolean Constructor() PerformerInfo()	
	Constructor() EditSecondaryRole() EditStageName()		
	Clown	Aerial	
	Item: STRING MusicalInstrument: STRING	Role: STRING	
	Constructor() PerformerInfo()	Constructor() PerformerInfo()	

Question	Answer	Marks	
4(b)	1 mark per bullet point to max 5:	5	
	 mark per bullet to max 4: class declaration (and end where applicable) declaring five attributes as private (with string data types where applicable) (language specific) constructor method (and end where applicable) with five parameters 		
	 initialising five attributes using parameters 1 mark per bullet to max 3: 		
	 procedure header (and close) for EditSecondaryRole // procedure header (and close) for EditStageName takes parameter 		
	 EditSecondaryRole replaces SecondaryRole with parameter 		
	 EditStageName replaces StageName with parameter 		
	Example Python:		
	class Performer(object):		
	<pre>definit (self, Firstname, Lastname, Stagename, SecondaryRole, Type): selfFirstName = Firstname selfLastName = Lastname selfStageName = Stagename selfSecondaryRole = SecondaryRole selfPerfType = Type</pre>		
	<pre>def EditSecondaryRole(self, NewRole): self.SecondaryRole = NewRole</pre>		
	<pre>def EditStageName(self, NewStageName): self.StageName = NewStageName</pre>		

Question	Answer	Marks
4(b)	Example Visual Basic:	
	Class Performer Private FirstName As String Private LastName As String Private StageName As String Private SecondaryRole As String, Public Sub New(ByVal Fname As String, ByVal Lname As String, ByVal Sname As String, ByVal SecRole As String, ByVal Type As String) FirstName = Fname LastName = Fname StageName = Sname SecondaryRole = SecRole PerfType = Type End Sub Public Sub EditSecondaryRole(ByVal Srole As String) SecondaryRole = Srole End Sub Public Sub EditStageName(ByVal Sname As String) StageName = Sname End Sub	
	End Class	

Question	Answer	Marks	
4(b)	Example Pascal:		
	type Performer = class		
	private		
	FirstName : String;		
	LastName : String;		
	StageName : String;		
	SecondaryRole : String;		
	PerfType : String;		
	public		
	Constructor init(Fname, Lname, Sname, SType, Srole: String);		
	Procedure EditSecondaryRole(Srole: String); Procedure EditStageName(Sname: String);		
	end;		
	Constructor Performer.init(Fname, Lname, Sname, Stype, Srole:String);		
	begin		
	Firstname := Fname;		
	Lastname := Lname;		
	<pre>StageName := Sname;</pre>		
	SecondaryRole := Srole;		
	PerfType := Stype;		
	end;		
	<pre>Procedure Performer.EditSecondaryRole(Srole: String);</pre>		
	begin		
	SecondaryRole := Srole;		
	end;		
	<pre>Procedure Performer.EditStageName(Sname: String);</pre>		
	begin		
	StageName := Sname;		
	end;		

PUDLISHED					
Question	Answer	Marks			
4(c)	1 mark per bullet point to max 8:	8			
	 class declaration with inheritance from Performer constructor taking five or six parameters call to inherited constructor sending either five parameters or four with "Acrobat UseFire declared as private Boolean In constructor, storing value in UseFire from parameter PerformerInfo header (and end where applicable) without any parameters outputs / returns StageName & " (real name " & FirstName & " " & SecondName & ") is an acrobat" "Fire is part of " & StageName & "'s act." ONLY printed when Fire is TRUE "When not performing, " & StageName & " is a " & SecondaryRole 				
	Example Python :				
	class Acrobat(Performer):				
	<pre>definit(self,Firstname, Lastname, Stagename, SecondaryRole, Fire): Performerinit(self, Firstname, Lastname, Stagename, SecondaryRole, "Acrobat") self. UseFire = Fire</pre>				
	<pre>def PerformerInfo(self): ReturnString = "%s (real name %s %s) is %s. " % (self. Stagename, self.Firstname, self. Lastname, Acrobat.PerfType) if(selfUseFire): ReturnString = ReturnString + "Fire is part of %s's act. " % (self.Stagename)</pre>				
	<pre>else: ReturnString = ReturnString + "Fire is not part of %s's act. " % (self.Stagename)</pre>				
	ReturnString = ReturnString + "When not performing, %s is a %s" % (self.Stagename, self.SecondaryRole) return ReturnString				

Question	Answer	Marks
4(c)	Example Visual Basic:	
	Class Acrobat : Inherits Performer Private UseFire As Boolean	
	Public Function PerformerInfo() as string PerformerInfo = Stagename + "(real name " + FirstName + " `` + LastName + ") is " + PerfType + ``."	
	IF(UseFire) THEN PerformerInfo = PerformerInfo + "Fire is part of " + Stagename + "'s act." ELSE	
	PerformerInfo = PerformerInfo + "Fire is not part of " + Stagename + "'s act." END IF	
	PerformerInfo = PerformerInfo + "When not performing, " + Stagename + " is a " + SecondaryRole	
	END FUNCTION	
	Public Sub New(ByVal Fname As String,ByVal Lname As String, ByVal Sname As String, ByVal SecRole As String, ByVal fire As String) MyBase.New(Fname, Lname, Sname, SecRole, "Acrobat") UseFire = fire	
	End Sub	
	End Class	

Question	Answer	Marks
		marko
4(c)	Example Pascal:	
	<pre>type Acrobat = class(Performer) private UseFire : Boolean; public Constructor init(Fname, Lname, Sname, Sfire, Srole: String, "Acrobat"); override; Function PerformerInfo() : String end;</pre>	
	<pre>constructor Acrobat.init(Fname, Lname, Sname, Sfire, Srole:String); begin Firstname := Fname; Lastname := Lname; StageName := Sname; SecondaryRole := Srole; PerfType := "Acrobat"; UseFire := Sfire; end;</pre>	
	<pre>Function Acrobat.PerformerInfo() : String; var ReturnString : String; begin ReturnString := Stagename + "(real name" + FirstName + " " + LastName + ") is " + PerfType; IF(UseFire) THEN ReturnString := ReturnString + "Fire is part of " + Stagename + "s act." ELSE ReturnString := ReturnString + "Fire is not part of " + Stagename + "'s act. "; ReturnString := ReturnString + "When not performing," + Stagename + " is a " + SecondaryRole;</pre>	
	<pre>Result = ReturnString; end;</pre>	

Question	Answer	Marks
4(d)(i)	1 mark per bullet point:	3
	 Assignment to Acrobat_1 Creates instance of Acrobat Correct five parameter values 	
	Example Python :	
	Acrobat_1 = Acrobat("Alex","Tan","Amazing Alex","Popcorn Seller", True)	
	Example VB.NET:	
	<pre>Acrobat_1 = New Acrobat("Alex","Tan","Amazing Alex","Popcorn Seller", True)</pre>	
	Example Pasca l:	
	<pre>Acrobat_1 := Acrobat("Alex","Tan","Amazing Alex","Popcorn Seller", True)</pre>	
4(d)(ii)	1 mark per bullet point to max 2:	2
	 Clown/Acrobat/Aerial inherit from Performer/base class // Clown/Acrobat/Aerial are the child/sub class and Performer in the parent/base/super Clown/Acrobat/Aerial can use the attributes from Performer Clown/Acrobat/Aerial can use the methods from Performer Clown/Acrobat/Aerial can extend the methods in Performer

Question	Answer	Marks
5(c)(ii)	1 mark per bullet point to max 2:	2
	Example:	
	 If there is any delay to a task which is part of the critical path then the overall project will be delayed Gives the earliest possible completion time this allows you to organise/allocate resources (efficiently) Frequently recalculate the critical path to see if there are any delays/new critical path has arisen Can identify where there is slack in activities so they can start later without affecting the critical path 	

Question	Answer	Marks
6(a)(i)	1 mark per bullet point:	3
	 Declaring a record type // class etc. Declaring Country as a string Declaring Pointer as an integer 	
	Example:	
	TYPE ListElement DECLARE Country : STRING DECLARE Pointer : INTEGER ENDTYPE	

Question	Answer	Marks
6(a)(ii)	1 mark per bullet point:	2
	 Declaring CountryList as an array with 15 elements Of type ListElement 	
	Example:	
	DECLARE CountryList : ARRAY[1 : 15] OF ListElement	
6(b)	1 mark for each completed statement	5
	<pre>PROCEDURE DeleteNode(NodeValue: STRING, ThisPointer: INTEGER, PreviousPointer: INTEGER) IF CountryList[ThisPointer].Value = NodeValue THEN CountryList[ThisPointer].Value ← ""</pre>	
	IF ListHead = ThisPointer THEN	
	ListHead ← CountryList[ThisPointer].Pointer ELSE	
	CountryList[PreviousPointer].Pointer ← CountryList[ThisPointer].Pointer ENDIF	
	CountryList[LastNode].Pointer ← ThisPointer LastNode ← ThisPointer	
	CountryList[ThisPointer].Pointer $\leftarrow -1$	
	ELSE IF CountryList[ThisPointer].Pointer <> -1 THEN	
	CALL DeleteNode (NodeValue, CountryList [ThisPointer]. Pointer, ThisPointer) ELSE	
	OUTPUT "DOES NOT EXIST"	
	ENDIF	
	ENDIF ENDPROCEDURE
