Paper 4 Data Response and Essays

May/June 2020

MARK SCHEME

Maximum Mark: 70

Published

Students did not sit exam papers in the June 2020 series due to the Covid-19 global pandemic.

This mark scheme is published to support teachers and students and should be read together with the question paper. It shows the requirements of the exam. The answer column of the mark scheme shows the proposed basis on which Examiners would award marks for this exam. Where appropriate, this column also provides the most likely acceptable alternative responses expected from students. Examiners usually review the mark scheme after they have seen student responses and update the mark scheme if appropriate. In the June series, Examiners were unable to consider the acceptability of alternative responses, as there were no student responses to consider.

Mark schemes should usually be read together with the Principal Examiner Report for Teachers. However, because students did not sit exam papers, there is no Principal Examiner Report for Teachers for the June 2020 series.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the June 2020 series for most Cambridge IGCSE™ and Cambridge International A & AS Level components, and some Cambridge O Level components.

Cambridge Assessment International Education – Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

LEVELS OF RESPONSE MARKING PROCESS

There are two steps that need to be taken in awarding the mark for the essay questions:

Step 1: Determine the level – start at the highest level and work down until you reach the level that best describes the answer. Use a ‘best-fit’ approach: which level does it most closely resemble overall, considering all of the assessment objectives on balance?

Step 2: Determine the mark within the level by considering the following:

- Consistently meets the criteria; clear evidence of the qualities of the level = at the top of the level
- Meets the level’s criteria but with some slight inconsistency or some parts of the criteria not addressed = at the middle or above the middle of the level (depending on number of marks available)
- Just enough achievement for this level on balance = either below the middle or at the middle of the level (depending on number of marks available)
- Answer is on the borderline of this level and the one below, i.e. it there is only limited evidence it meets the criteria for this level = at the bottom of level

LEVELS OF RESPONSE MARKING DESCRIPTIONS

Please also see the mark scheme for each part of each essay, detailing the ranges of marks to be awarded for each Level, and some illustrative content.

| Level | Knowledge and understanding | Application | Analysis | Evaluation |
|-------|--|--|---|---|
| L4 | detailed knowledge of relevant facts and theory perceptive understanding of the specific requirements of the question throughout the answer | relevant, apposite illustrations and specific examples are introduced to add depth and fullness to the answer recognises the underlying economic concepts and principles and applies these in relevant situations to develop the answer | detailed, precise and purposeful description, explanation and analysis using appropriate economic terms and concepts correctly and fluently draws clear, reasoned conclusions a sound, well-structured answer | critical evaluation of the issues, considering relevant information and economic principles distinguishes between facts, hypotheses and/or value judgements challenges assumptions of the question or model |
| L3 | adequate knowledge of relevant facts and theory a reasoned understanding of the question's requirements shown in the answer | some appropriate relevant illustration or examples seen but they may be quite general or not very full applies theory and facts with accurate reference to the question to develop the answer | straightforward, satisfactory analysis: generally clear statements, supported by reasoned arguments including some specific economic terms and concepts draws some conclusions | partly complete evaluation of the issues in terms of either relevant information or economic principles attempt to distinguish between facts, hypotheses and/or value judgements |

| | | | | |
|----|---|---|---|--|
| | | | a functionally organised answer | attempt to comment on assumptions |
| L2 | <p>identifies some relevant facts and/or theory</p> <p>the answer overall has a general relevance to the question, showing some understanding</p> | <p>illustration may not be fully relevant and is superficial or overgeneralised</p> <p>an accurate application of some related theory or fact(s), with little or no development</p> | <p>some analysis present but limited by omissions, error(s), irrelevant details or unclear communication</p> <p>conclusions may not be drawn from it</p> <p>a disorganised answer</p> | <p>some evidence of an ability to evaluate, discriminate, or to make basic judgements, considering some relevant information</p> |
| L1 | <p>shows some relevant knowledge</p> <p>the answer indicates that the question has not been correctly understood</p> | <p>barely relevant, minimal or tangential illustration</p> <p>basic errors of theory or of fact with inadequate development</p> | <p>any analysis present is likely to have major errors, omissions or be mostly irrelevant</p> | <p>minimal or no evidence of the evaluation skills of criticism, judgement or discrimination in the answer</p> |

| Question | Answer | Marks |
|----------|---|----------|
| 1(a) | <p>What is meant by <i>nudge theory</i>?</p> <p>Policies designed to influence behaviour by persuasion or example in order to achieve one of the main government economic policy aims.</p> | 2 |
| 1(b) | <p>Consider whether the information provides any evidence that nudge theory could increase an economy's GDP.</p> <ul style="list-style-type: none"> • paying taxes increases revenue which might be spent on projects to increase GDP • more people working reduces unemployment which increases income and might help economic growth • increasing saving for education might increase skill levels in the economy and improve productivity. | 6 |
| 1(c) | <p>Distinguish between demand-side and supply-side policies and identify and explain <u>one</u> demand-side policy and <u>one</u> supply-side policy from the information.</p> <p>Distinction (2) identify (2) explain (2) demand side – changes in tax rates, supply side – improving infrastructure, training, productivity, borrowing could be used to stimulate either demand or supply</p> | 6 |
| 1(d) | <p>The information is entitled 'In pursuit of well-being'. Discuss whether the information supports the idea that GDP is a good measure of well-being.</p> <p>HDI is said to be a measure of well-being. Countries are ranked by HDI. Some countries with low HDI also have low GDP, but some with higher HDI do not have highest GDP. Examples should be given. But the GDP is not by per capita and does not use PPP. There is no real evidence that GDP is a comparable accurate measure of well-being.</p> | 6 |

| Question | Answer | Marks |
|----------|---|-------|
| 2 | <p>Discuss whether competitive markets in the private sector are the best way to achieve an efficient allocation of resources.</p> <p>Explanation of efficiency. Discussion of what is meant by competitive markets and whether this means only perfect competition. Efficiency is achieved in perfect competition but other competitive markets may not and individual actions are not always best for society as a whole. Discussion of reasons for market failure and necessity/desirability of government intervention to achieve efficiency.</p> <p>L4 (18–25 marks): For an accurate discussion of efficiency, competition and market failure, with examples and a conclusion about the need for government intervention. No conclusion – maximum 21.</p> <p>L3 (14–17 marks): For a competent explanation of productive and allocative efficiency and more limited discussion of different competitive markets. Still expect a consideration of the reasons for market failure and the need for government.</p> <p>L2 (10–13 marks): For a briefer analysis of efficiency and of market failure with few examples and no comment about different types of competitive markets. No conclusion.</p> <p>L1 (1–9 marks): For an answer that has some basic correct facts but includes irrelevancies and errors of theory.</p> | 25 |
| 3(a) | <p>Explain what is meant by a ‘consumer’s equilibrium position’ in indifference curve theory and how it can be used to form a demand curve.</p> <p>Explanation of consumer equilibrium using indifference curves. Equilibrium position should be determined initially, then for a change in price.</p> <p>L4 (9–12 marks): For a sound explanation of the analysis and a clear comment on how a demand curve is formed. A clear understanding of the principles involved.</p> <p>L3 (7–8 marks): For an accurate reference to the question but with a more limited analysis probably without a good explanation of the construction of a demand curve.</p> <p>L2 (5–6 marks): For a briefer explanation of the analysis and equilibrium position but with no link to the demand curve.</p> <p>L1 (1–4 marks): For an answer that has some basic correct facts but includes irrelevancies and errors of theory.</p> | 12 |

| Question | Answer | Marks |
|----------|--|-------|
| 3(b) | <p>One of the world’s first filmed singing commercials advertised a soft drink. It stated that, for the same price, consumers would get twice as much of that drink than that of its major rival. This made it cheaper and was similar to a price reduction. Its rival responded by an advertising campaign stating that its own drink was superior to the first firm’s inferior product.</p> <p>Discuss whether it is possible to use diagrams from indifference curve theory to illustrate how a consumer might react to these two advertising campaigns.</p> <p>Analysis of income and substitution effects. The first drink could possibly be represented by a shift in the budget line for a price reduction. The consumer might substitute it for the rival drink. But the notion of a more superior drink might result in a negative income effect.</p> <p>L4 (9–13 marks): For a clear analysis of income and substitution effects and a reasoned account of the changes in consumer equilibrium using both effects. Accurate diagrams.</p> <p>L3 (7–8 marks): For a weaker analysis of the two effects or diagrams which contain slight inaccuracies.</p> <p>L2 (5–6 marks): For a poor analysis and weak diagrams confusingly presented.</p> <p>L1 (1–4 marks): For an answer that has some basic correct facts but includes irrelevancies and errors of theory.</p> | 13 |

| Question | Answer | Marks |
|----------|---|-------|
| 4 | <p>'A firm is fully aware of market conditions and its best rational interest would be achieved by pursuing the clearly defined objective of maximising profits.'</p> <p>Consider whether this statement has any merit in different market structures.</p> <p>Candidates should consider each of the assumptions. Is the firm aware of market condition, is its best interest achieved by maximising profits and in which market structure might that be true.</p> <p>L4 (18–25 marks): For a sound discussion of under what market structure the firm will be fully aware of market conditions, and whether it is always best to aim to maximise profits. Consideration of contestable markets, alternative aims, price leadership, lack of information, degrees of competition and lack of information. Maximum 21 no conclusion.</p> <p>L3 (14–17 marks): For a competent comment but with consideration of only part of the assumptions and a less developed analysis.</p> <p>L2 (10–13 marks): For a weak comment on the assumptions and only a brief explanation of alternative aims.</p> <p>L4 (1–9 marks): For an answer that shows some knowledge but does not indicate that the question has been fully grasped or where the answer is mostly irrelevant.</p> | 25 |

| Question | Answer | Marks |
|----------|--|-------|
| 5 | <p>After negotiation, the workers in an industry obtained from employers higher wage rates. The employers' spokesperson said 'the cost of the deal would have to be met through improved productivity or by reductions in other costs'.</p> <p>Analyse whether this deal can be incorporated into the economic theory of wages and consider the possible outcome for employment of such a deal.</p> <p>Candidates should discuss how the theory might incorporate a negotiated wage rate and the effect of this on profits and employment. Discussion of how the improvement in productivity and reductions in costs might influence the outcome.</p> <p>L4 (18–25 marks): For recognition of the theory applied to imperfect competition and a discussion of the effect on profits and employment of fixing a wage above the market rate. Consideration of shifting the MRP curve and/or the cost curve.</p> <p>L3 (14–17 marks): For a competent explanation of the theory but with a more limited discussion of the shifts in MRP and/or costs.</p> <p>L2 (10–13 marks): For a correct but very brief analysis and some poor evaluation.</p> <p>L4 (1–9 marks): For an answer that shows some knowledge but does not indicate that the question has been fully grasped or where the answer is mostly irrelevant</p> | 25 |

| Question | Answer | Marks |
|----------|--|-------|
| 6(a) | <p>Explain what economists mean by an inflationary gap and discuss why this is considered to be an economic problem. Use a diagram(s) to support your answer.</p> <p>A clear definition of the meaning of the term ‘inflationary gap’ will be supported by an accurate, clearly labelled supporting diagram which identifies the inflationary gap. Some attempt should then be made to consider why this might cause economic problems. References might be made to the negative effect on expectations, private investment, the exchange rates, savers and debtors plus any other relevant effects.</p> <p>L4 (9–12 marks): For an answer that explains the meaning of an inflationary gap and which refers to at least three potential negative effects. The relative importance of each identified effect should be considered.</p> <p>L3 (7–8 marks): For an answer that identifies at least two negative effects associated with an inflationary gap and considers their relative importance or analyses three potential impacts on the economy associated with an inflationary gap.</p> <p>L2 (5–6 marks): For an answer that describes what is meant by an inflationary gap and supports this with a reasonably accurate diagram and some brief comment regarding potential negative effects on the economy.</p> <p>L1 (1–4 marks): For an answer that has some basic correct facts but includes irrelevancies and errors of theory.</p> | 12 |

| Question | Answer | Marks |
|----------|---|-------|
| 6(b) | <p>How far would you agree that the use of monetary policy is the most effective way to solve the problem of an inflationary gap?</p> <p>Responses should indicate a clear understanding of what is meant by monetary policy and alternative methods of monetary control should be explained. References should then be made to the problems associated with an inflationary gap and an attempt made to discuss the effectiveness of alternative monetary policies used to reduce an inflationary gap. The effectiveness of these policies should be evaluated and compared with alternative fiscal/supply side policies.</p> <p>L4 (9–13 marks): For a detailed explanation of why monetary policies might solve problems associated with an inflationary gap. At least two types of monetary policy should be considered. Alternative policy measures should then be explained and discussed. A conclusion should then consider the relative effectiveness of monetary policy options compared to fiscal/supply side alternatives.</p> <p>L3 (7–8 marks): For analysis of how monetary policy might work in order to reduce an inflationary gap. A clear diagram will be provided and problems associated with an inflationary gap will be identified. Only a brief comment will be provided regarding alternative policy approaches.</p> <p>L2 (5–6 marks): For an answer that focuses upon explaining what is meant by an inflationary gap and describes alternative monetary policy options but does not discuss the effectiveness of either monetary policy or alternative policy options.</p> <p>L1 (1–4 marks): For an answer that has some basic correct facts but includes irrelevancies and errors of theory.</p> | 13 |

| Question | Answer | Marks |
|----------|---|-------|
| 7(a) | <p>‘Developing countries have low levels of productivity and a high dependency ratio.’</p> <p>Explain the meaning of these <u>two</u> characteristics and consider whether they are linked.</p> <p>Candidates should provide clear explanation of the terms productivity and dependency ratio. It is essential that the characteristics of both terms are established within the context of undeveloped countries. Responses might suggest that the two terms are linked, for example high dependency ratio might be associated with low productivity or an increase in productivity might lead to a reduction in the death rate and a reduction in the birth rate, due to its effect on the overall level of increase of GDP. Alternatively, it could be argued that the two are not necessarily related. A range of alternative responses would be acceptable provided they are supported by an acceptable economic rationale.</p> <p>L4 (9–12 marks): an answer that clearly explains both characteristics in the context of an underdeveloped country and then discusses how each characteristic might be linked. Responses should examine links which work both ways, for example, why an increase in productivity might affect the dependency and vice versa. Different approaches are acceptable but a conclusion should be provided.</p> <p>L3 (7–8 marks): For a clear explanation of both characteristics and their relation to an underdeveloped economy. Some attempt to establish links between these characteristics but the argument will not be fully developed.</p> <p>L2 (5–6 marks): For a limited attempt to describe the two characteristics but only provides a brief explanation of their relevance to an underdeveloped economy. A brief outline of potential links might be described but not discussed.</p> <p>L1 (1–4 marks): For an answer that has some basic correct facts but includes irrelevancies and errors of theory.</p> | |

| Question | Answer | Marks |
|----------|--|-------|
| 7(b) | <p>Assess the view that foreign direct investment remains the key to economic growth in developing countries.</p> <p>Foreign direct investment should be explained referring specifically to the role of private multinational corporations (MNCs) including references to improving labour skills, building factories, promoting research and development. Economic growth should be clearly defined as the increase in real GDP in a specific time period. Alternative growth strategies such as export led growth, direct government investment, structural change might be considered. The importance of foreign direct investment should then be compared with the alternative strategies identified.</p> <p>L4 (9–13 marks): For an answer that clearly explains both characteristics in the context of an underdeveloped country and then discusses how each characteristic might be linked. Responses should examine links which work both ways, for example, why an increase in productivity might affect the dependency and vice versa. Different approaches are acceptable but a conclusion should be provided.</p> <p>L3 (7–8 marks): For a clear explanation of both characteristics and their relation to an underdeveloped economy. Some attempt to establish links between these characteristics but the argument will not be fully developed.</p> <p>L2 (5–6 marks): For a limited attempt to describe the two characteristics but only provides a brief explanation of their relevance to an underdeveloped economy. A brief outline of potential links might be described but not discussed.</p> <p>L1 (1–4 marks): For an answer that has some basic correct facts but includes irrelevancies and errors of theory.</p> | |
