Ν 6 ω	You must answ	er on the question paper.	
4	You will need:	Calculator Pair of compasses Protractor	

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You should use a calculator where appropriate.
- You must show all necessary working clearly.

INFORMATION

- The total mark for this paper is 100.
- The number of marks for each question or part question is shown in brackets [].

1 A store manager surveys a sample of customers to find their opinions on the quality of clothing sold in the store. The results are shown in the pictogram. Men		* 000080000)0002 *			81

3 The table gives information on the number of teachers at an international school. For each teacher there are two pieces of information: the seniority of the teacher, and the region of the world from which they come.

3

Sopiority	Region						
Semonty	Africa	Asia	Europe				
Senior teacher	3	5	2				
Junior teacher	9	8	6				
Assistant teacher	2	4	1				

For example, there are 3 Senior teachers who come from Africa.

Find

(a) the number of Assistant teachers,

			[1]
(b)	the number of teachers from Asia or Europe,		
(c)	the percentage of teachers who are Junior teachers.		[1]
			[1]
A te	acher is selected at random to be interviewed.		
Find	the probability that the teacher		
(d)	is a Senior teacher or an Assistant teacher,		
(e)	is a Junior teacher, given that the teacher comes from	m Africa.	[1]
			[1]

(a) Explain what is meant by the statement that there is positive correlation between the variables in a bivariate distribution.

4

The variables in three bivariate distributions were measured and plotted. The following scatter diagrams were obtained.

(b) Describe fully the correlation shown by the variables in each of these distributions.

Distribution A	
Distribution B	
Distribution C	
	[4]

5 A café sells teas which are either large or small, are either standard or special, and are either black or green.

5

The diagram shows the number of these teas sold one morning which were one or more of large, standard, and black.

- (a) Find the number of teas sold which were
 - (i) large,
- (ii) standard and black,
 (iii) large and green,
 (iv) small, special and black.
 (b) Explain why it is not possible from this information to find the total number of teas sold.

6 At an 'Eat Simply' conference, plates of 9 sandwiches are provided for participants, of which 4 are cheese and 5 are tomato.

6

A participant chooses three sandwiches at random, without replacement, from such a plate.

(a) Show that the probability of choosing exactly one cheese sandwich is $\frac{10}{21}$.

(b) If X is the number of cheese sandwiches chosen, find, as fractions, the probabilities of all other possible values of X. Present your answers in a probability distribution table.

7 Nandi is a music journalist. At a music festival, she surveys the amount of time musicians plan to spend each week practising. The following histogram summarises her results.

8 In this question the fertility rate of a population is defined as the number of births per 1000 females.

8

The table below gives information about the female population and births in a particular town for the year 2023, together with the standard population of the area in which the town is situated.

Age group of females Births		Population of females in age group	Age group fertility rate	Standard population of females (%)
Under 20	238	6800		30
20–29	369	4100		20
30–39	407	5500		15
Over 39	143	11 000		35

(a) Calculate the crude fertility rate for the town.

(b) Calculate the fertility rate for each age group and insert the values in the table above.

(c) Use your results from part (b) to calculate the standardised fertility rate for the town.

......[4]

[3]

The table below gives information on three other towns in the same region for 2023.

Town	Population	Crude fertility rate, per thousand	Standardised fertility rate, per thousand
A	26000	39.5	38.1
В	28000	47.0	48.3
С	24000	52.5	52.4

9

(e) Find the number of births in the town in which there were most births.

(a)	Give one advantage and one disadvantage of forming a large set of data into a grouped frequency distribution.
	Advantage
	Disadvantage

10

The following table summarises the daily electricity consumption, in kilowatt hours (kWh), of a family over a period of 50 days.

Daily electricity consumption, x (kWh)	Number of days, f	
2–under 4	4	
4–under 6	8	
6–under 8	17	
8–under 10	12	
10–under 12	7	
12–under 14	2	

For these daily electricity consumption values

(b) state the modal class,

..... kWh [1]

(c) estimate the mean and standard deviation.

[2]

Mean	 kWh

Standard deviation kWh [6]

4040/12/O/N/24

(d) Estimate the total amount owed by the family to the electricity supply company for these 50 days.

.....[4]

Another electricity supply company charges \$0.22 per kWh of electricity consumed, but has no additional service charge.

(e) Would it have been cheaper for this family to have used this other supplier for these 50 days? Show your working.

......[2]

10 Azlan is the coach of a cricket team. He measured the speed, in kilometres per hour (km/h), of 72 deliveries (balls bowled) by Buraid, one of his players. His results are summarised in the cumulative frequency curve below.

12

(ii) the interquartile range, given that the lower quartile is 115.5 km/h,

4040/12/O/N/24

[3]

	(iii)	the 40th percentile,
	(iv)	the value of p if the p th percentile is 123 km/h.
		[2
Azla less	an cla s thar	assifies deliveries with speeds of 125 km/h or more as 'fast' and deliveries with speeds on 125 km/h as 'medium-paced'.
(b)	Use	the graph to estimate, for these deliveries by Buraid,
	(i)	the percentage which Azlan classified as 'fast',
On	(ii) Azlar uracy	the median speed of those which Azlan classified as 'medium-paced'. [2 n's advice, Buraid reduces the speed of his deliveries by 5 km/h, in order to obtain greate
(c)	Esti	mate the percentage of Buraid's deliveries which Azlan will now classify as 'fast'.
(d)	(i)	State which one of the measures calculated in part (a) will remain unchanged.
	(ii)	Explain why this measure will remain unchanged.
		[1

11 The osprey is a bird of prey which eats fish. After the eggs hatch, the male catches fish and brings them back to the nest to feed the chicks.

14

An osprey nest was observed over a ten-week period. The table shows the data collected.

Week number after hatching, x	1	2	3	4	5	6	7	8	9	10
Number of fish caught, y	4	8	6	9	11	10	15	13	19	21

[2]

(b) Find the lower semi-average and plot this and the two given averages on your graph.

(c) Use your plotted averages to draw a line of best fit, and find its equation in the form y = mx + c.

15

......[4]

The species of fish that the male osprey brought back to the nest over this period were categorised as Trout, Mullet, Flounder or Other. The pie chart represents the proportion of the total in each category.

The chicks will not leave the nest for many more weeks.

- (d) Use the pie chart and your answer from part (c) to estimate, for Week 16 after hatching,
 - (i) the number of trout that will be caught,

(ii) the number of fish caught that will **not** be mullet.

[Question 11 continues on the next page]

[Turn over

Give two assumptions made in obtaining your answers to part (d).
